Solicitation State:
Texas

This illustration is hypothetical and is intended solely to depict how different crediting strategies and rates can affect the annuity's contract value and contractual benefits including any optional features selected. Actual results may therefore be higher or lower than shown. This illustration is only valid in the state(s) where the annuity is solicited or offered. Interest rates, index factors, fees and other assumed values are not guaranteed and can be changed by the company prior to the date your contract is issued. Upon issuance of your contract, the Minimum Declared Interest Rate (applicable only to the Fixed Interest Account) and other guarantees will be stated in your contract and will not change over its life. Please be sure to read the additional disclosure at the end of the illustration. This material is intended only for educational purposes to help you, with the guidance of your financial professional, make informed decisions. We are not a fiduciary and do not provide investment advice or recommendations.

This illustration is not valid unless accompanied by a Power Index 7 Plus Owner Acknowledgment and Disclosure Statement. Please read this statement for more detailed information not included in this hypothetical illustration.

PAST PERFORMANCE IS BASED ON HYPOTHETICAL HISTORICAL DATA AND IS NOT A GUARANTEE OF FUTURE RESULTS. THIS ILLUSTRATION IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE. ACTUAL INTEREST CREDITING RESULTS WILL VARY BASED ON MARKET CONDITIONS, INDEX ALLOCATIONS, PARTICIPATION RATES AND INDEX CAPS (AS APPLICABLE). THE VALUES IN THIS ILLUSTRATION ARE NOT GUARANTEED, EXCEPT FOR THOSE ITEMS CLEARLY LABELED AS GUARANTEED, AND ARE NOT ESTIMATES OF THE AMOUNTS YOU CAN EXPECT FROM YOUR ANNUITY.

Power Index 7 Plus is issued by **American General Life Insurance Company** (AGL), Houston, Texas. Guarantees are backed by the claims-paying ability of AGL.

INVESTMENT AND INSURANCE PRODUCTS ARE:
• NOT FDIC INSURED • NOT INSURED BY ANY FEDERAL GOVERNMENT AGENCY • NOT A DEPOSIT OR OTHER OBLIGATION OF, OR GUARANTEED BY, THE BANK OR ANY OF ITS AFFILIATES • SUBJECT TO INVESTMENT RISKS, INCLUDING POSSIBLE LOSS OF THE PRINCIPAL AMOUNT INVESTED

Combine growth potential and protection in one simple solution!

What if there was a way to grow your money, protect it from market volatility and ensure that income will last as long as you live? A **Power Index 7 Plus Index Annuity with Lifetime Income Plus Multiplier Flex** is designed to do just that. It can help:

- **Grow** your assets for retirement on a tax-deferred basis.
- **Protect** your savings from market downturns.
- **Guarantee** your income for life.

Power your retirement with a unique blend of growth, protection and lifetime income.

Learn more about The Power Series of Index Annuities

Watch Video

Please note for scenarios that illustrate more than 30 years, the most recent 10-year period is repeated until it reaches the Latest Annuity Date (LAD) of age 95.

* Because index contains less than 10 years of actual history, some states do not allow the Franklin Quality Dividend Index, the ML Strategic Balanced Index and the PIMCO Global Optima Index to be illustrated.

For more information about interest crediting strategies referenced in this illustration, please see page 13 of this illustration titled "Understanding Your Interest Crediting Strategy(ies)"

Snapshot of your customized illustration:

Premium: **$400,000**
Contract Type: **Single Life**
Age at Issue: **50**
Age at lifetime income activation: **50**

This illustration includes the following hypothetical performance scenarios:

Guaranteed values (Minimum rates)

Scenarios		
0% index interest and Fixed Interest Account Minimum Declared Interest Rate (MDIR)	Reflects minimum contract values for the specified period. Assumes any money allocated to an index interest crediting strategy earns 0% interest and any money allocated to the Fixed Interest Account earns the current MDIR, held constant for the entire period.	Page 8

Non-guaranteed Values (Current rates)

Scenarios		
Selected Specific period	Historical performance over the last 30 years for indices with a long enough track record. Most recent 15 years of back-tested performance (repeated twice) for indices with insufficient history.*	Page 9
Assumed rate	Based on a hypothetical constant rate for the specified period. This constant rate scenario is not likely to occur, and actual results may be higher or lower than those shown.	Page 10
Interest crediting and accumulation values	Shows the values associated with each individual interest crediting strategy from the above Specific Period scenario.	Page 11
Most favorable, least favorable	Highlights performance using the 10 best consecutive years out of the last 20 (Most favorable), the 10 worst consecutive years out of the last 20 (Least favorable). Reflects hypothetical contract values for the specified period, based on historical index performance and using current declared index factors (e.g., caps, spreads and interest rates), current initial Fixed Interest Account interest and other current values held constant for the period.	

Power Index 7 Plus is an index annuity designed for long-term retirement savings. It is not a direct investment in the stock market. Lifetime Income Plus Multiplier Flex is available at contract issue for an annual fee. Please see pages 16 - 17 for additional information on the fee, as well as Key Terms and Definitions.

Basic facts about index annuities

- Index annuities are long-term contracts.
- You do not invest directly in the securities and other investments comprising the index.
- Index interest is not guaranteed.
- Factors determining degree of participation in index performance (e.g., caps) may limit interest earned, can be reset each index term and can be lower in future periods.
- Contracts with living benefits have rider fees that reduce contract value as long as the rider is in effect; deduction of these fees reduces amount of interest you derive from the index option.
- Constituent investments in a "dynamic" index can change over time based on the guiding index strategy, and there is no guarantee that such changes will produce positive performance or will mirror changes in essentially static indices like the S&P 500.

An important word about the assumptions underlying the illustrated values and how illustrations are merely hypothetical

First, it is important to note that hypothetical illustrations are intended to help you understand how this annuity product works in broad terms. In general, actual performance of the index crediting strategies is utilized, and these figures are combined with current crediting rates in order to demonstrate a potential performance path. [1] Many different factors will cause your actual performance to differ from the illustrated outcomes, such as index performance, initial participation and crediting rates, renewal rates and any withdrawals taken. It is important to note that this illustration is not a promise of future returns or results.

Further, we want to highlight some important factors that impact this illustration and should be understood:

- **Historical performance:** Generally, market performance during the 2010's was particularly strong, and this illustration utilizes much of the performance from that time period. While that type of performance could continue, past performance is not indicative of future results, and different volatility and/or interest rate environments can result in different performance results of any index in the future.
- Impact of Market Interest Rates And Other Factors. A number of variables are taken into consideration when we set crediting rates like participation rates and trigger rates. Those factors include prevailing interest rates in relevant markets, changes in competitor rates, and the withdrawal charge status of the annuity contract. Crediting rates that have increased provide you with a greater opportunity for higher interest credits, but still could result in zero interest credits if the underlying index performance is not positive. Similarly, lower crediting rates provide you with less opportunity than during higher interest rate periods, but still could result in zero interest credits if the underlying index performance is not positive.

Also be aware that current crediting rates are held constant for the entire period reflected in the illustration. Please keep in mind that your actual crediting rates can change (lower or higher) as frequently as annually and will impact the actual outcome.

Therefore, as you work with your financial professional to determine what is best for you, please be mindful of this information and do not overly rely upon the illustrated outcomes when setting your expectations for future results. Your actual results will be determined based on the future performance of the index you choose and the initial and renewal crediting rates set on the annuity, among other factors.

To provide a balanced range of potential outcomes, this illustration includes the following hypothetical performance scenarios

To help you understand how varying index performance could impact the outcome of illustrated values shown (including any withdrawals, if applicable), we present a range of outcomes using the following three specified scenarios:

- **Minimum rates (page 8)**

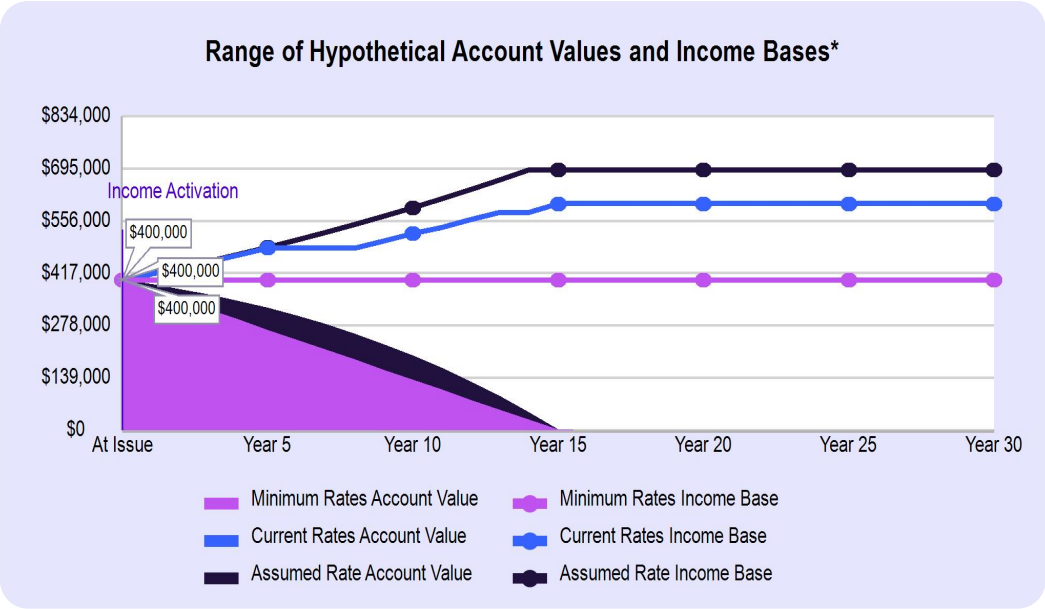
  Assumes a 0% index interest rate and a Minimum Declared Interest Rate (MDIR) for the Fixed Interest Account.
- **Specified Period (page 9)**

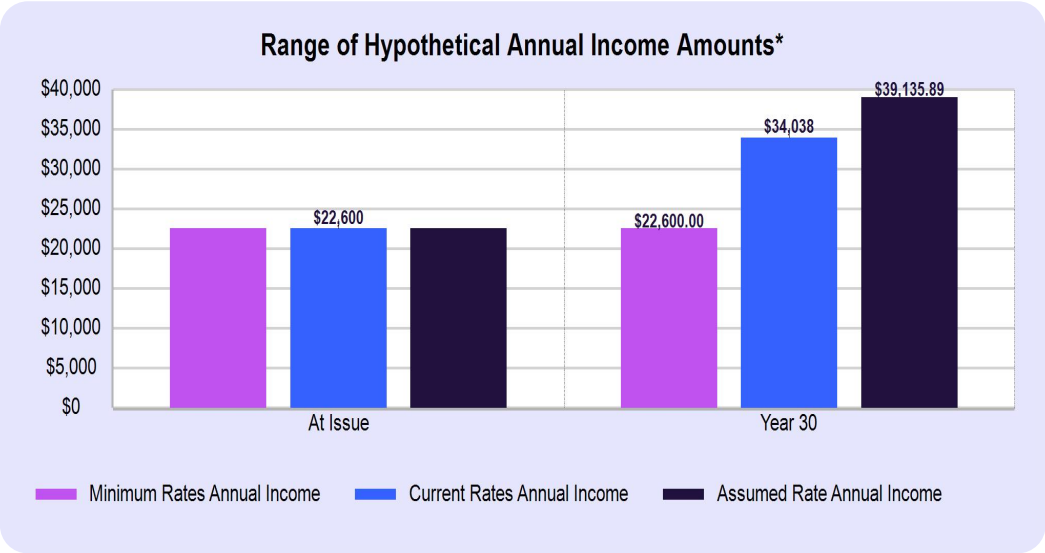
  The figures in this illustration are based on the actual past performance of the index over the period depicted if the index has existed for the entirety of that period. If the index has not existed for the entire period, the actual or back tested performance may be repeated (for example, 10 years repeated three times to show 30 years). Illustrations depicting a time period longer than 30 years (e.g., the Latest Annuity Date of age 95) will similarly derive back-tested performance through that process of repeating performance periods. Any money allocated to the Fixed Interest Account assumes the current Fixed Interest Account rate (Current Rate) is held constant for the period shown. In this illustration, we have not imposed any limit on the return that can be assumed for a given year.
- **Assumed rate (page 10)**

  Assumes a 4.00% index interest rate.

These range of outcomes are highlighted in the charts to the right. The top chart shows the hypothetical account values and Income Bases for all three scenarios. The bottom chart displays the annual income amounts based on a 5.65% withdrawal rate at age 50. Back-tested performance (explained on page 3 is a way of generating hypothetical performance for a period when an index was not yet available. It gives you an indication of how the annuity would have performed by applying the index methodology to historical data. For back-tested performance we use the most recent 15 years repeated to show 30 years.

The goal in providing this information is to give you a more complete overview of how the annuity could perform over time. Since the outcome is based in part on the performance of an index, there is no guarantee as to contract value or lifetime income growth, and the actual value of your contract and the lifetime income you'll receive will differ.





The bottom chart displays the annual income amounts based on the applicable withdrawal rate at the age associated with the displayed year. *See Key Terms and Definitions on pages 16 - 17 of this illustration

Understanding annuities and the hypothetical illustration

Annuities are designed for long-term retirement savings and offer tax deferral. Withdrawals of taxable amounts are subject to ordinary income tax and, if taken prior to age 59½, a 10% federal tax penalty may apply. Partial withdrawals may reduce benefits available under the contract as well as the amount available upon a full surrender. Early withdrawals may also be subject to withdrawal charges and market value adjustment (MVA). If your premium is tax-qualified (such as an IRA), an annuity provides no additional tax-deferred benefit beyond that provided by the plan. You should only use a fixed-index annuity in a tax-qualified plan if you want to benefit from features other than tax deferral. Please consult with your financial and tax advisor regarding your individual situation. Guarantees are backed by the claims paying ability of the issuing insurance company.

This hypothetical illustration is provided to give you a feel for the interest crediting that would result from each of the interest crediting strategies based on the history or back-tested history of the related indices. Allocating money to these options does not represent an investment directly in the index. Power Index 7 Plus offers interest accounts, each with a different interest crediting strategy; see Understanding Your Interest Crediting Strategies on page 13 for details. These accounts are subject to change until the contract is issued and once issued, they may be discontinued or changed with prior notice.

Lifetime Income Plus Multiplier Flex can provide guaranteed lifetime income for as long as you live with the flexibility to take withdrawals prior to activating the rider and beginning lifetime withdrawals. The annual percentage of the Income Base that you receive for life depends on the number of people covered and the covered person(s) age(s) at the time of activation of lifetime withdrawals. The rider offers you the opportunity to earn annual income credits equal to 200% of the rate of interest earned prior to activating lifetime income and 100% of the rate of interest earned after lifetime income begins. You even have the opportunity to change the number of individuals covered under the rider (Single or Joint Life) to help meet varying income needs, or to address life events like marriage, divorce or death of a spouse. Please see Key Terms and Definitions for more details.

Fees, charges and other important information

- **Withdrawal charge:** A withdrawal charge may be assessed if you take money from the contract during the first 7 contract years. Power Index 7 Plus withdrawal charges decline over 7 years (8%-7%-6%-5%-4%-3%-2%). The charge is not assessed against any applicable 10% free withdrawal amount.
- **Rider fee:** The Lifetime Income Plus Multiplier Flex (Single illustration uses an annual fee rate of 1.00% of the Income Base for Single Life and Joint Life withdrawals. No GLB rider fee will apply to partial withdrawals, but a pro-rata GLB rider fee will apply on surrenders made at any time (including after the withdrawal change period ends)
- **Index performance:** It is likely that the index will not repeat historical performance, the current declared factors and rates will change, and actual values therefore will be higher or lower than those in this illustration. However, they will never be less than the minimum guarantees set forth in your contract.
- **Market Value Adjustment (MVA):** An MVA applies to amounts subject to withdrawal charges. The MVA may be positive or negative. Generally, if interest rates rise, the MVA will decrease the amount you receive due to a withdrawal. If interest rates fall, the MVA will increase the amount you receive. The values depicted in this illustration do not include the positive or negative impact of the MVA.

Back-tested performance of certain indices

Important Information Regarding Back-Tested Performance of the ML Strategic Balanced Index, PIMCO Global Optima Index, Dimensional US Foundations Index, and Invesco New Economy Index: Performance of these indices, some or all of which may be available under this annuity, including but not limited to hypothetical, back-tested performance, is not necessarily an indication of future results. Back-tested performance is not actual historical performance, but as a general rule is derived by applying actual past performance of the index to conditions that were present in the relevant markets during a time period preceding the inception of the index. These back-tested calculations generally are done based on the same methodology used today to derive the actual performance of the index. Thus, back-tested performance is an estimate of how the index would have performed prior to its inception. The back-test period may not correspond to the entire available history of the index.

Another limitation of back-tested performance is that, generally, the performance reflects application of the index methodology and selection of index constituents with the benefit of hindsight. No hypothetical record can completely account for the impact of financial risk associated with real-world events. For example, there are numerous factors related to equities and fixed income securities which cannot be, and have not been, accounted for in the preparation of the back-tested information.

Key terms used in the illustration

- **Interest earned and Credited Interest Rate:** The amount of interest earned in your index interest account on the contract anniversary is referred to as interest earned on index accounts. It is based on the change in the index as well as the factors that go into calculating the Credited Interest Rate. On the contract anniversary, the amounts in each index account are multiplied by the applicable Credited Interest Rate for that term. For the fixed interest account, the Minimum Declared Interest Rate (MDIR), as well as the initial and future annual stated rates, are credited and compounded daily to obtain the declared rate.
- **Withdrawal amount:** The amount withdrawn from the contract value.
- **Contract Anniversary Value:** The value of the contract on the anniversary of the date it was issued.
- **Cash Surrender Value:** In this illustration, it represents what you would receive if you withdrew all your money at one time. This illustrated value is the greater of the Contract Anniversary Value less applicable withdrawal charges and prorated fee or the Minimum Withdrawal Value. The Minimum Withdrawal Value is the guaranteed minimum amount you would receive upon a full surrender, payment of death benefit or annuitization. It is equal to 87.5 % of your premiums, less net withdrawals (gross withdrawals after the effect of any withdrawal charges or MVA), growing at an annual rate as specified in your contract (currently set at 2.40%).
- **Death Benefit:** The amount payable upon death, which is the greater of the Contract Value or the Minimum Withdrawal Value.

Please read the Owner Acknowledgement and/or Buyer's Guide that will be presented to you when you purchase your annuity for more detailed information not included in this hypothetical illustration.

What you should know about the indices underlying our index crediting strategies

The S&P 500® Index* includes 500 of the leading companies in the U.S. stock market. It is widely regarded as the standard for measuring U.S. stock market performance. The returns for this index does not include dividends. This means that dividends paid on the securities underlying this index is not included in the index return, and index interest therefore will not reflect the higher returns that would apply if dividends were included. When allocating money to an interest crediting option that uses this index in the calculation of interest, a key consideration for the performance of the S&P 500® index (excluding dividends) is the change in the value of the Index from the beginning of the index term to its end.

The ML Strategic Balanced Index® (MLSB) blends equity and fixed income indices using a non-discretionary, rules-based process to adjust exposures to the S&P 500® Index and the Merrill Lynch 10-Year U.S. Treasury Futures Total Return Index. This process may help the Index generate positive returns while meeting a target volatility level. Pursuant to the rules of the index, the index weightings are rebalanced every six months based on the historical volatility of the Index. As an additional measure of risk control, the index methodology may cause increases or decreases in cash positions daily to help maintain the overall volatility of the Index at or near its targeted 6%. Volatility control measures seek to provide smoother results and mitigate sharp market fluctuations. While this type of strategy can lessen the impact of market downturns, it is important to note that it may also lessen the impact of market upturns, therefore limiting upside potential. When allocating money to an interest crediting option that uses this index in the calculation of interest, some key considerations for the performance of the underlying index include the change in the S&P 500 Index (excluding dividends) over the index term, the change in the Merrill Lynch 10-Year U.S. Treasury Futures Total Return Index over the index term, the weightings assigned to the indices (e.g. target volatility mechanism), the absolute level of interest rates, any directional move in interest rate levels, interest rate volatility, and stock market volatility

The PIMCO Global Optima Index® (PIMCO)* is designed to combine diversified market exposure with enhanced return potential. It allocates to a broad range of global equity and U.S. fixed income markets while targeting a moderate, consistent risk profile. The equity portion optimizes across U.S. large cap, U.S. mid cap, U.S. small cap, international and emerging markets. Specifically, it seeks to enhance returns by dynamically adjusting its allocation across these markets, favoring those markets that exhibit positive momentum and that are likely to offer value. The fixed income portion invests in high-grade U.S. bonds, including Treasuries, corporate bonds, and mortgage-backed securities. In order to manage risk, the index adjusts the mix of equity and fixed income on a daily basis in order to meet a target volatility level of 7.5% annualized

The Russell 2000® Index* is an equity index that measures the performance of the 2,000 smallest companies in the Russell 3000® Index, which is made up of 3,000 of the biggest U.S. stocks. The Russell 2000® Index is constructed to provide a comprehensive and unbiased small-cap barometer and is completely reconstituted annually to ensure larger stocks do not affect the performance and characteristics of the true small-cap index.

The MSCI EAFE Index* is designed to represent the performance of large-and mid-cap securities across 21 developed markets in Europe, Australasia, Far East, excluding the US & Canada. As of September 2018, it had more than 900 constituents and covered approximately 85% of the free float-adjusted market capitalization in each country.

*The returns for these indices do not include dividends. This means that dividends paid on the securities underlying these indices are not included in the index return for each index, and index interest therefore will not reflect the higher returns that would apply if dividends were included.

The following illustrations reflect the pre-inception performance data of the ML Strategic Balanced Index (MLSB) and PIMCO Global Optima Index based on hypothetical back-tested closing values. Back-testing periods illustrated vary as described. Post-inception, actual live index historical performance data of the MLSB Index will be based on closing values beginning 8/31/2014. The PIMCO became available on 10/13/2017 and the illustration will be based on back-tested data prior to the inception date. The Invesco New Economy Index became available on 9/30/2025 and the illustration will be based on back-tested data prior to the inception date. Likewise, the Dimensional U.S. Foundations Index has been retrospectively calculated using back-tested performance and did not exist prior to the index inception date of 9/30/2022. Please note: Some states do not permit the use of back-tested performance in illustrations, even though the interest crediting options are available within the annuity product

Understanding your interest crediting strategy(ies) continued

Index	Index term	Index rate cap	Trigger rate

Russell 2000® Index	Annual Point-to-Point		
S&P 500® Index	Annual Point-to-Point	✓	✓

Interest rate calculation is based on:

Index term
The period used to measure the change in the index prices for each index interest account.

Index rate cap
Interest is calculated on every contract anniversary based on the percentage change of the respective index over a one-year term. This percentage change, subject to the declared index rate cap, will become the stated index interest rate for the next index term.

Participation rate
Interest is calculated on every contract anniversary based on the percentage change of the respective index over a one-year term. This percentage change is multiplied by the declared participation rate, resulting in the stated index interest rate for the next index term

Performance-triggered rate
Preset rate of interest that is credited to the index interest account when index performance is equal to or greater than the minimum index value change (currently 0%). The trigger rate is credited even if index performance is higher.

Fixed Interest Account
This option is a fixed-rate account with a 1-year term. Interest is credited daily on a compounded basis to achieve the annual declared rate. The Fixed Interest Account initial interest rate is guaranteed for the first contract year. A new interest rate will be declared annually in advance of each contract anniversary and will be guaranteed for the following contract year.

Please see pages 16 - 17 for more information on the illustration, including Key Terms and Definitions.

Lifetime Income Plus Multiplier Flex would have provided you $700,600 in total income over 31 years while still generating $22,600 per year in annual income.

Note: All values shown are net of fees. See page(s) 16 - 17 for more information on the illustration, including Key Terms and Definitions. This scenario assumes that the index performance results in no credited interest earned (except that if you made an allocation to the fixed account, the illustrated values reflect earning the minimum interest rate in that account). Actual results may be more or less favorable than the hypothetical values shown.

Lifetime Income Plus Multiplier Flex would have provided you $961,961 in total income over 31 years while still generating $34,038 per year in annual income.

All values shown are net of fees. See page 16 - 17 for more information on the illustration, including Key Terms and Definitions. Each element affecting the illustrated values (e.g., the interest crediting rates) is guaranteed only for the initial rate term and is likely to change over time. Thus, actual results may be more or less favorable than those shown. The figures in this illustration are based on the actual, past performance of the index over the period depicted if the index has existed for the entirety of that period. If the index has not existed for the entire period, back-tested performance is used to generate the illustrated values. In this illustration, we have not limited back-tested performance by imposing an annual limit on the annual limit on the credited interest rate applied.

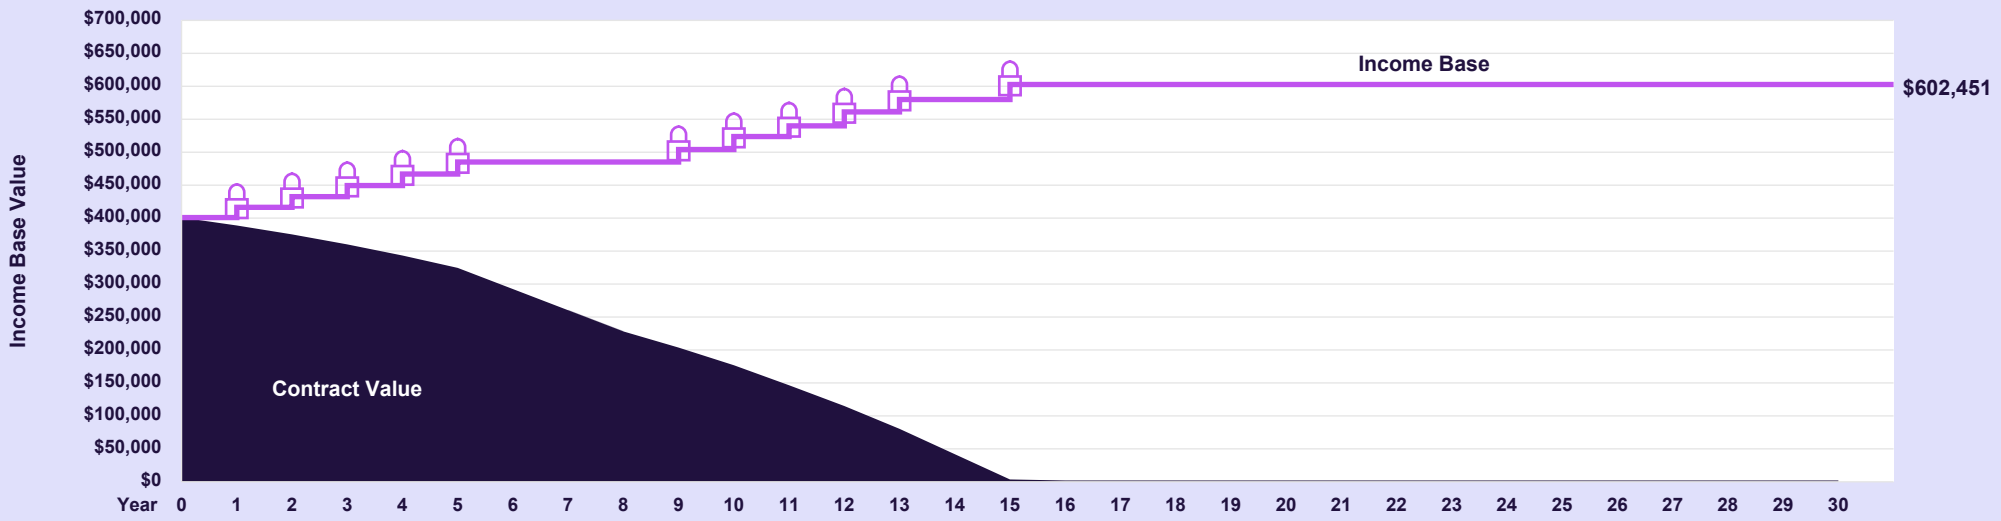
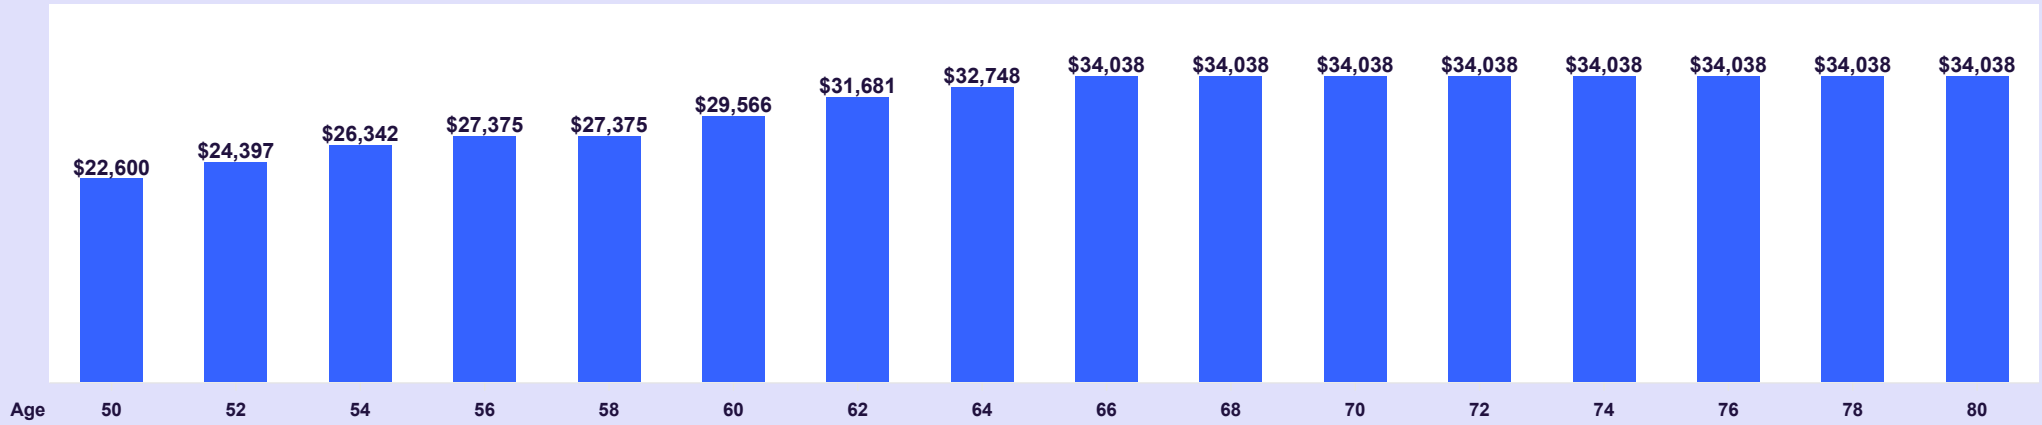
If the contract value declines to zero, you would continue to receive $34,038 for life (5.65% of $602,451). Please see "Maximum Annual Withdrawal Percentage" in Key Terms and Definitions on page 16 for details on how lifetime income is calculated. Based on current rates held constant.
Assumes contract rates and factors from the Hypothetical Growth Scenario (Specific Period, page 9)
For the 0% index interest & Minimum Declared Interest Rate scenario, please see page 8.

Lifetime Income Multiplier Flex can help increase your retirement income based on interest earned





Lifetime Income Plus Multiplier Flex would have provided you $961,961 in total income over 31 years while still generating $34,038 per year in annual income.

Assumes contract rates and factors from the Hypothetical Growth Scenario (Specific Period, page 9)

If the contract value declines to zero, you would continue to receive of $34,038 for life (5.65% of $602,451). Please see "Maximum Annual Withdrawal Percentage" in Key Terms and Definitions on page 16 for details on how lifetime income is calculated. Based on current rates held constant.

Understanding your interest crediting strategy(ies)

Power Index 7 Plus may credit interest using up to 7 different strategies, including 5 index interest account types and a Fixed Interest Account, as detailed below. Index interest calculations, as well as the current initial interest rate and the Minimum Declared Interest Rate on the Fixed Interest Account, are subject to change at any time until the contract is issued. You can find the initial interest rate, index rate cap(s), spread, participation rate(s) and performance triggered rate as well as the minimum and maximum guaranteed rates and values on the Contract Data Page and/or Rider Data Page(s) of the contract. Annual interest rates and index account factors will be declared in advance of each contract anniversary and guaranteed for the following contract year.

Index interest accounts are not a permanent part of the contract and may be removed due to circumstances beyond AGL's control, such as the discontinuation of an index, a change in the composition or calculation of an index and/or the inability to license the use of an index or the inability to hedge risks associated with these index interest accounts. Special rules govern how assets in a discontinued index interest account may be reallocated. These rules may differ by state. Please see the Owner Acknowledgment and Disclosure Statement for more information.

What you should know about the indices

S&P 500® and S&P® are registered trademarks of Standard and Poor's Financial Services LLC . The trademarks have been licensed to S&P Dow Jones Indices LLC and have been sublicensed for use for certain purposes by American General Life Insurance Company. The Power Index 7 Plus.is not sponsored, endorsed, sold or promoted by Standard and Poor's Financial Services LLC , S&P Dow Jones Indices LLC , or their affiliates, and none of Standard and Poor's Financial Services LLC , S&P Dow Jones Indices LLC , or their affiliates makes any representation regarding the advisability of paying premiums for the Power Index 7 Plus

Important information regarding back-tested performance of the ML Strategic Balanced Index (MLSB) and PIMCO Global Optima Index: Back-testing is a way of generating hypothetical performance for a period when an index was not yet available. Back-tested performance gives you an indication of how an annuity would have performed, but it is hypothetical and not actual historical performance. The back-test calculations apply the index methodology to historical financial data and use the same methodology going forward. The index methodology was developed with the benefit of hindsight and may not result in performance that corresponds to the back tested returns shown. No index methodology can completely account for the impact of financial risks and real-world events related to the equities, fixed-income, and other asset classes, all of which can affect actual performance.

The previous illustrations reflect pre-inception performance data of the ML Strategic Balanced Index (MLSB) and PIMCO Global Optima Index based on hypothetical back-tested closing values. The inception dates for the MLSB and PIMCO are, respectively, 8/31/2014 and 10/13/2017. Post-inception performance data for these indices will be based on their actual closing values.

Please note: Some states do not permit the use of back-tested performance in illustrations, even though Interest Crediting options are available within the annuity product.

The MSCI EAFE Index The product referred to herein is not sponsored endorsed, or promoted by MSCI, and MSCI bears no liability with respect to any such product or any index on which such product is based. The contract contains a more detailed description of the limited relationship MSCI has with Licensee and any related product.

The ML Strategic Balanced Index® embeds an annual index cost in the calculations of the change in index value over the index term. This "embedded index cost" will reduce any change in index value over the index term that would otherwise have been used in the calculation of index interest, and it funds certain operational and licensing costs for the index. It is not a fee paid by you or received by American General Life Insurance Company ((("AGL")). AGL's licensing relationship with Merrill Lynch, Pierce, Fenner & Smith Incorporated for use of the ML Strategic Balanced Index® and for use of certain service marks includes AGL's purchase of financial instruments for purposes of meeting its interest-crediting obligations.

Some portion of those instruments will, or may be, purchased from Merrill Lynch, Pierce, Fenner & Smith Incorporated or its affiliates.

Merrill Lynch, Pierce, Fenner & Smith Incorporated and its affiliates ("BofA Merrill Lynch") indices and related information, the name "BofA Merrill Lynch", and related trademarks are intellectual properties licensed from BofA Merrill Lynch, and may not be copied, used, or distributed without BofA Merrill Lynch's prior written approval. The products of licensee AGL have not been passed on as to their legality or suitability, and are not regulated, issued, endorsed, sold, guaranteed or promoted by BofA Merrill Lynch. BOFA MERRILL LYNCH MAKES NO WARRANTIES AND BEARS NO LIABILITY WITH RESPECT TO ANY INDEX , ANY RELATED INFORMATION , ITS TRADEMARKS, OR THE PRODUCT(S) (INCLUDING WITHOUT LIMITATION, ITS QUALITY, ACCURACY, SUITABILITY A N D / OR COMPLETENESS).

The ML Strategic Balanced Index® (the "Index") is the property of Merrill Lynch, Pierce, Fenner & Smith Incorporated, which has contracted with S&P Opco, LLC (a subsidiary of S&P Dow Jones Indices LLC) to calculate and maintain the Index. The Index is not sponsored by S&P Dow Jones Indices or its affiliates or its third-party licensors (collectively, "S&P Dow Jones Indices"). S&P Dow Jones Indices will not be liable for any errors or omissions in calculating the Index. "Calculated by S&P Dow Jones Indices" and the related stylized mark(s) are service marks of S&P Dow Jones Indices and have been licensed for use by Merrill Lynch, Pierce, Fenner & Smith Incorporated.

The PIMCO Global Optima Index® (the "Index") is a trademark of Pacific Investment Management Company LLC ("PIMCO") and has been licensed for use by American General Life Insurance Company ("AGL"). AGL's with respect to the Power Series of Index Annuities (the "Product"). The Index is the exclusive property of PIMCO and is made and compiled without regard to the needs, including, but not limited to, the suitability or appropriateness needs, as applicable, of AGL, the Product, or owners of the Product. The Product is not sold, sponsored, endorsed or promoted by PIMCO or any other party involved in, or related to, making or compiling the Index. Neither PIMCO, the index calculation agent nor any of the constituent owners provides investment advice to AGL with respect to the Product or to owners of the Product.

Neither PIMCO nor any other party involved in, or related to, making or compiling the Index has any obligation to continue to provide the Index to AGL with respect to the Product.

Neither PIMCO nor any other party involved in, or related to, making or compiling the Index makes any representation regarding the Index, Index information, performance or annuities generally or the Product particularly.

PIMCO disclaims all warranties, express or implied, including all warranties of merchantability or fitness for a particular purpose or use. PIMCO shall have no responsibility or liability whatsoever with respect to the Product. The Index comprises a number of constituents, some of which are owned by entities other than PIMCO. The Index relies on a variety of publicly available data and information and licensable equity and fixed-income sub-indices. All disclaimers relative to PIMCO also apply separately to those constituent owners and to the index calculation agent.

The Russell 2000® Index The index annuity product to which this disclosure applies (the "Product") has been developed solely by American General Life Insurance Company (AGL). The "Product" is not in any way connected to or sponsored, endorsed, sold or promoted by the London Stock Exchange Group plc and its group undertakings (collectively, the "LSE Group"). FTSE Russell is a trading name of certain of the LSE Group companies.

All rights in the Russell 2000® Index (the "Index") vest in the relevant LSE Group company which owns the Index. "Russell®", "Russell 2000 ®", " FTSE® Russell®", and " FTSE Russell®" are trademark(s) of the relevant LSE Group companies and are used by any other LSE Group company under license. "TMX®" is a trademark of TSX, Inc. and used by the LSE Group under license. The Index is calculated by or on behalf of FTSE International Limited or its affiliate, agent or partner. The LSE Group does not accept any liability whatsoever to any person arising out of (a) the use of, reliance on or any error in the Index or (b) the purchase of or operation of the "Product". The LSE Group makes no claim, prediction, warranty or representation either as to the results to be obtained from the Product or the suitability of the Index for the purpose to which it is being put by AGL.

Understanding the hypothetical illustration

This hypothetical illustration is provided to give you a feel for the interest crediting that would result from each of the interest crediting strategies based on the history or back-tested history of the related indices. Allocating money to these options does not represent an investment directly in the index. Power Index 7 Plus offers interest accounts, each with a different interest crediting strategy; see Understanding Your Interest Crediting Strategies on page CreditingStrategyPageOne - CreditingStrategyPageTwo. These accounts are subject to change until the contract is issued and once issued, they may be discontinued or changed with prior notice.

- **Displayed average annual returns:** For this illustration, the average annual returns displayed in this hypothetical illustration are calculated using the geometric mean of the illustrated period.
- **Fixed Interest Account:** If the illustration has any allocation to the Fixed Interest Account, it will present values using the Minimum Declared Interest Rate (MDIR) or the current crediting rate. The illustrated MDIR may not be the MDIR you actually receive, since it is subject to change at any time up until the contract is issued. Once your contract is issued, however, the MDIR applicable to the Fixed Interest Account, if available, will be stated on the Contract Data Page and is guaranteed never to change for the life of the contract. Currently, the MDIR is set at 1.00%.
- **Index performance:** It is likely that the index will not repeat historical performance, the current declared factors and rates will change and actual values therefore will be higher or lower than those in this illustration. However, they will never be less than the minimum guarantees set forth in your contract. Please read the Owner Acknowledgement and Disclosure Statement that will be presented to you when you purchase your annuity for more detailed information. The average annual returns displayed in this hypothetical illustration are calculated using the geometric mean of the illustrated period.

What you should know about the indices (continued)

Lifetime Income Plus Multiplier Flex can provide guaranteed lifetime income for as long as you live with the flexibility to take withdrawals prior to activating the rider and beginning lifetime withdrawals. The annual percentage of the Income Base that you receive for life depends on the number of people covered and the covered person(s) age(s) at the time of activation of lifetime withdrawals. The rider offers you the opportunity to earn annual income credits equal to 200% of the rate of interest earned prior to activating lifetime income and You even have the opportunity to change the number of individuals covered under the rider (Single or Joint Life) to help meet varying income needs, or to address life events like marriage, divorce or death of a spouse. of the rate of interest earned after lifetime income begins. You even have the opportunity to change the number of individuals covered under the rider (Single or Joint Life) to help meet varying income needs, or to address life events like marriage, divorce or death of a spouse. Please see Key Terms and Definitions for more details.

Key terms and definitions

For the index interest accounts

- **Index term:** An index term is a period used to measure the change in the index prices for each index interest account. At the end of the index term (i.e., on the contract anniversary), we may credit index interest. The initial index term for the interest index accounts begins on the contract issue date. Subsequent index terms begin on the end date of the previous index term. The end date for an index term is on a contract anniversary.
- **Index annual change:** Represents the positive or negative change associated with the index for a given term. This change is the basis for the interest earned and Credited Interest Rate associated with the interest-crediting options illustrated.
- **Minimum index rate cap:** a declared index rate cap cannot be set lower than the applicable minimum index rate cap stated on the Rider Data Page of your contract.
- **Minimum participation rate:** a declared participation rate cannot be set lower than the minimum participation rate stated on the Rider Data Page of your contract.
- **Minimum performance-triggered rate:** a declared trigger rate cannot be set lower than the minimum trigger rate stated on the Rider Data Page of your contract.
- **Maturity Date:** If the contract value is greater than zero on the Maturity Date, you will need to select one of these annuity options: 1) annuitize the contract value under the contract's annuity provisions; 2) elect any payment option that is mutually agreeable between you and the company. Available annuity options include lifetime income payments and payments for a fixed period of time. For contracts with an optional Maturity Date, the periodic income amount for at least one of the annuity income options available based on the guaranteed rates in the contract, at the later of age seventy (70) or ten (10) years after issue, but in no case later than the maximum annuitization age or date in the contract.
- **Participation (PAR) rate:** The initial participation rate equals 100% and is guaranteed for the first index term. Subsequent participation rates are declared at the end of each index term (on the contract anniversary) and are guaranteed for the following index term. The PAR rate may reduce or increase the interest earned on the index crediting strategies for each index term.
- **Tax-qualified plans:** This modified single premium product may not be appropriate for use with contributory IRAs (IRA, Roth and SEP) if you plan to make ongoing contributions. Also keep in mind, purchasing an annuity within a tax-qualified plan provides no additional tax-deferred benefit beyond that provided by the plan.

Key terms and definitions (continued)

For the Lifetime Income Plus Multiplier Flex Guaranteed Living Benefit (GLB) Rider

- **Activation of Lifetime Income Plus Multiplier Flex:** The decision to begin lifetime withdrawals under the rider. Activation must be requested in writing. At the time of activation, you will be able to make changes to the number of individuals covered under Lifetime Income Plus Multiplier Flex. You can also change this coverage prior to activation under specific situations such as marriage, divorce or death. Please consult with your tax advisor regarding any tax ramifications.
- **Annual income for life or MAWA:** The Lifetime Income Plus Multiplier Flex rider's Maximum Annual Withdrawal Amount (MAWA), which is the maximum amount of income you can take each year (once the rider is activated) without affecting your Income Base and Income Credit Base. Prior to beginning lifetime income, you have the option to take withdrawals, but these withdrawals will impact the value of your Income Base and Income Credit Base. Please see the Owner Acknowledgment and Disclosure Statement for details. Withdrawals can begin as early as age 50.
  - **Age:** Is based on the age of the Covered Person chosen for Single Life option, or the age of the younger covered person for the Joint Life option.
  - **Excess withdrawal:** After Activation withdrawals that exceed the MAWA are considered "excess withdrawals" and will proportionally reduce the Income Base, which is the value used to determine the amount of your lifetime income and annual GLB fee. Withdrawals under the rider that do not exceed the MAWA in a contract year are not subject to withdrawal charges or MVA; however, excess withdrawals may be subject to Market Value Adjustment (MVA) and the withdrawal charge schedule, beginning at 8% and declining over seven years.

Maximum Annual Withdrawal Percentage

Once Lifetime Income Plus Multiplier Flex is activated. Shown as a percentage of the Income Base.

Age of covered person(s) at first lifetime withdrawal	One covered person (Single Life)	Two covered persons (Joint Life)
75 and older	7.80%	7.30%
72 prior to 75	7.35%	6.85%
70 prior to 72	7.15%	6.65%
65 prior to 70	6.75%	6.25%
60 prior to 65	6.15%	5.65%
50 prior to 60	5.65%	5.15%

- **Eligible premiums:** Equal all premiums received during the first 30 days of the contract. Income Credits are not included in the calculation of eligible premiums.
- **Income Base:** The value on which guaranteed lifetime income and the annual rider fee are based. The initial Income Base is equal to the eligible premiums. It is also reduced for withdrawals (prior to activation) and excess withdrawals (after activation). During the Income Credit Period, the Income Base is automatically increased to the greater of your highest Contract Anniversary Value or the current Income Base increased by any available Income Credit. The Income Base is only a value used as a factor in calculating your Maximum Annual Withdrawal Amount ("MAWA") and annual rider fee; it is not a liquidation value nor can it be taken as a lump sum.
- **Income Credit:** Is the amount that may be added to your Income Base in each of the contract years prior to activation, see Income Credit Period. The annual income credit is equal to the Income Credit Base multiplied by a rate equal to 200% of the interest earned in the annuity. When withdrawals are taken within the parameters of the income rider, the rate is adjusted to 100% for the life of the rider.
- **Income Credit Base:** A component of the calculation of the annual Income Credit. Initially, the Income Credit Base is equal to eligible premiums. The Income Credit Base will increase if the Income Base is increased as a result of a highest Contract Anniversary Value step-up. The Income Credit Base is not increased if your Income Base rises due to the addition of the Income Credit.
- **Income Credit Period:** The number of years the annual Income Credit is available. The Income Credit Period ends on the Lifetime Income activation date.
- **Maturity Date:** If the contract value and the Income Base are greater than zero on the Maturity Date, you will need to select one of these annuity options: 1) annuitize the contract value under the contract's annuity provisions; 2) annuitize the contract and receive payments equal to the maximum annual withdrawal amount as of the Maturity Date for a fixed period of time, as long as you are living. After the fixed period ends, you will then receive the protected income payment amount until the death(s) of the covered person(s); 3) elect any payment option that is mutually agreeable between you and the company or 4) surrender the contract. Available annuity options include lifetime income payments and payments for a fixed period of time.
- **Rider fee:** There is a separate annual charge for the Lifetime Income Plus Multiplier Flex rider equal to 1.00% of the Income Base. The charge is the same for single life or joint life payments.
- **Tax-qualified plans:** This modified single premium product may not be appropriate for use with contributory IRAs (IRA, Roth and SEP) if you plan to make ongoing contributions. Also keep in mind, purchasing an annuity within a tax-qualified plan provides no additional tax-deferred benefit beyond that provided by the plan.
- **Withdrawal type – GLB:** Represents the annual withdrawal amount being calculated based on the Income Base under the illustrated optional GLB.
- **Additional note on cancellation:** If you find that the Lifetime Income Plus Multiplier Flex optional feature is no longer right for you, you may cancel the feature on the 5th contract anniversary or any contract anniversary thereafter. Once cancelled, the feature cannot be re-elected. Keep in mind that the feature may be automatically terminated under certain circumstances, such as when the contract is annuitized or surrendered. Other circumstances may also apply.
