A Powerful Solution for Your Retirement Income Needs

Power Index Preferred Plus Income℠ Annuity **with Lifetime Income Max℠**

A hypothetical fixed-index annuity illustration prepared for:

Valued Client

Prepared by:

Valued Advisor
Texas
719-442-6400
719-442-6401

Solicitation State: California

Date prepared: 2/4/2026

This illustration is hypothetical and is intended solely to depict how different crediting strategies and rates can affect the annuity's contract value and contractual benefits including any optional features selected. This illustration is only valid in solicitation state. Interest rates, index factors, fees and other assumed values are not guaranteed and can be changed by the company prior to the date your contract is issued. Actual results may therefore be higher or lower than shown. Your Minimum Declared Interest Rate (applicable only to the Fixed Interest Account) and other guarantees will be stated in your contract. Please be sure to read the additional disclosure at the end of the illustration. This material is intended only for educational purposes to help you, with the guidance of your financial professional, make informed decisions. We are not a fiduciary and do not provide investment advice or recommendations.

THIS IS AN ILLUSTRATION ONLY. AN ILLUSTRATION IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE. INTEREST RATES, DIVIDENDS, OR VALUES THAT ARE SET FORTH IN THE ILLUSTRATION ARE NOT GUARANTEED, EXCEPT FOR THOSE ITEMS CLEARLY LABELED AS GUARANTEED.

The purchase of a fixed index annuity is not required for, and is not a term of, the provision of any banking service or activity.

Not FDIC or NCUA/NCUSIF Insured
May Lose Value • No Bank or Credit Union Guarantee **Not a Deposit • Not Insured by any Federal Government Agency**

THIS ILLUSTRATION IS NOT COMPLETE UNLESS ALL PAGES ARE INCLUDED.

Issued By **American General Life Insurance Company (AGL), Houston, Texas**

By purchasing the Power Index Preferred Plus Income, you can benefit from:

- **GROWTH** potential through index crediting strategies

  Access a range of strategies designed to help accumulate more assets for retirement income.

- **INCOME** that's guaranteed for life

  Take advantage of lifetime income options, such as Lifetime Income Max, available for an additional annual fee. Or you can choose annuitization, a process that can convert your contract into lifetime income payments at no additional cost.

- **PROTECTION** against current taxes

  Through the power of tax deferral, you pay no current income tax on any gains until they're withdrawn.

This hypothetical illustration is provided to give you the interest crediting that could result from each of the interest crediting strategies based on the history or back-tested history of the related indexes. Allocating money to these options does not represent an investment directly into the index. Power Index Preferred Plus Income offers interest accounts, each with a different interest crediting strategy, see Understanding Your Interest Crediting Strategies. These accounts are subject to change until the contract is issued and once issued, they may be discontinued or changed with prior notice.

• Fees and Charges. The Lifetime Income Max illustration uses an annual fee rate of 1.00% of the income base for Single Life and Joint Life. A withdrawal charge may be assessed if you take money from the contract during the first seven contract years. Power Index Preferred Plus Income withdrawal charges decline over seven years (8-7-6-5-4-3-2%). The withdrawal charge is not assessed against any applicable 10% free withdrawal amount. A market value adjustment ("MVA") applies to amounts subject to withdrawal charges. The MVA may be positive or negative. Generally, if interest rates have risen, the MVA will decrease the amount you receive due to a withdrawal. If interest rates fall, the MVA will increase the amount you receive. The illustrated scenarios within this report do not present the potential positive or negative impact of an MVA. Withdrawal charges and MVA may be waived under a Terminal Illness Rider or Extended Care Rider, if applicable.

If the following illustration has any allocation to the Fixed Interest Account, it will present values using the Minimum Declared Interest Rate (MDIR) or the current crediting rate. The illustrated MDIR may not be the MDIR you actually receive since it is subject to change at any time up until the contract is issued. Once your contract is issued, however, the MDIR applicable to the Fixed Interest Account, if available, will never change. Additionally, the MDIR is guaranteed never to be less than 1.00%. MDIR is stated on the Contract Data Page and once the contract is issued, is in effect for the life of the contract.

It is likely that the index will not repeat historical performance, the current declared factors and rates will change and actual values therefore will be higher or lower than those in this illustration. However, they will never be less than the minimum guarantees set forth in your contract.

Lifetime Income Max can provide guaranteed lifetime income for as long as you live with the flexibility to take income prior to activating the rider and beginning lifetime withdrawals. The annual percentage of the Income Base that you receive for life depends on the number of people covered and the covered person(s) age(s) at the time of activation of lifetime withdrawals. The rider locks in the greater of interest earned or an annual income credit of 10% on each contract anniversary for guaranteed lifetime income. An income credit of 10% income credit is available each year prior to Lifetime Income Activation. You even have the opportunity to change the number of individuals covered under the rider (Single or Joint Life) to help meet varying income needs, or to address life events like marriage, divorce or death of a spouse. Please see Key Terms and Definitions for more details.

Annuities are designed for long-term retirement savings and offer tax deferral. Withdrawals of taxable amounts are subject to ordinary income tax and, if taken prior to age 59½, a 10% federal tax penalty may apply. Partial withdrawals may reduce benefits available under the contract as well as the amount available upon a full surrender. Early withdrawals may also be subject to withdrawal charges and MVA. Keep in mind, if your premium is tax-qualified (such as an IRA), an annuity provides no additional tax-deferred benefit beyond that provided by the plan. You should only use a fixed-index annuity in a tax-qualified plan if you want to benefit from features other than tax deferral. Please consult with your financial and tax advisor regarding your individual situation. If you elect the income benefit, the fee reduces the contract value on an annual basis. This means that in prolonged down markets you could lose premium. **Guarantees are backed by the claims paying ability of the issuing insurance company.**

Please read the Owner Acknowledgement and Buyer's Guide that will be presented to you when you purchase your annuity for more detailed information not included in this hypothetical illustration.

What you should know about the indices underlying our Index Crediting Strategies

The **S&P 500® Index*** includes 500 of the leading companies in the U.S. stock market. It is widely regarded as the standard for measuring U.S. stock market performance. When allocating money to an interest crediting option that uses this index in the calculation of interest, a key consideration for the performance of the S&P 500® index (excluding dividends) is the change in the value of the Index from the beginning of the index term to its end.

The **MSCI EAFE Index*** is designed to represent the performance of large- and mid-cap securities across 21 developed markets in Europe, Australasia, Far East, excluding the US & Canada. As of September 2018, it had more than 900 constituents and covered approximately 85% of the free float-adjusted market capitalization in each country.

The **ML Strategic Balanced Index™** (MLSB) blends equity and fixed income indices using a non-discretionary, rules-based process to adjust exposures to the S&P 500® Index and the Merrill Lynch 10-Year U.S. Treasury Futures Total Return Index. This process may help the Index generate positive returns while meeting a target volatility level. Pursuant to the rules of the index, the index weightings are rebalanced every six months based on the historical volatility of the Index. As an additional measure of risk control, the index methodology may cause increases or decreases in cash positions daily to help maintain the overall volatility of the Index at or near its targeted 6%. Volatility control measures seek to provide smoother results and mitigate sharp market fluctuations. While this type of strategy can lessen the impact of market downturns, it is important to note that it may also lessen the impact of market upturns, therefore limiting upside potential. When allocating money to an interest crediting option that uses this index in the calculation of interest, some key considerations for the performance of the underlying index include the change in the S&P 500 Index (excluding dividends) over the index term, the change in the Merrill Lynch 10-Year U.S. Treasury Futures Total Return Index over the index term, the weightings assigned to the indices (e.g. target volatility mechanism), the absolute level of interest rates, any directional move in interest rate levels, interest rate volatility, and stock market volatility.

The **Russell 2000® Index*** is an equity index that measures the performance of the 2,000 smallest companies in the Russell 3000® Index, which is made up of 3,000 of the biggest U.S. stocks. The Russell 2000® Index is constructed to provide a comprehensive and unbiased small-cap barometer and is completely reconstituted annually to ensure larger stocks do not affect the performance and characteristics of the true small-cap index.

The **Franklin Quality Dividend Index** provides exposure to a combination of ETFs and cash or cash-equivalents. The ETFs utilized invest in U.S. large-cap stocks that tend to pay relatively high dividends or have low price volatility.

*The returns for these indices do not include dividends. This means that dividends paid on the securities underlying these indices are not included in the index return for each index, and index interest therefore will not reflect the higher returns that would apply if dividends were included.

Important Information Regarding Back-Tested Performance of the ML Strategic Balanced Index (MLSB): Performance of these indices, some or all of which may be available under this annuity, including but not limited to hypothetical, back-tested performance, is not necessarily an indication of future results. Back-tested performance is not actual historical performance, but as a general rule is derived by applying actual past performance of the index to conditions that were present in the relevant markets during a time period preceding the inception of the index. These back-tested calculations generally are done based on the same methodology used today to derive the actual performance of the index. Thus, back-tested performance is an estimate of how the index would have performed prior to its inception. The back-test period may not correspond to the entire available history of the index.

The following illustrations reflect the pre-inception performance data of the ML Strategic Balanced Index (MLSB) based on hypothetical back-tested closing values. Back-testing periods illustrated vary as described. Post-inception, actual live index historical performance data of the MLSB Index will be based on closing values beginning 8/31/2014. The Franklin Quality Dividend Index became available on 12/20/2019 and the illustration will be based on back-tested data prior to the inception date.

Please note: Some states do not permit the use of back tested performance in illustrations, so for those states we will only illustrate indices with actual historical performance even though the Interest Crediting options are available within the annuity product.

To provide a balanced range of potential outcomes, this illustration includes thefollowing hypothetical performance scenarios

Guaranteed Values (Minimum Rates)

- **Minimum rates (Page 6 & 7):** Assumes a 0% index interest rate and a Minimum Declared Interest Rate (MDIR) for the Fixed Interest Account.

Non-Guaranteed Values (Current Rates) - The benefits and values are not guaranteed

- **Specific Period (Page 8 & 9):** The figures in this illustration are based on the actual past performance of the index over the period depicted if the index has existed for the entirety of that period. If the index has not existed for the entire period, back-tested performance is used to generate the illustrated values for the remainder of the period. This is done by taking performance for a specific, prior time period (e.g., 10 years or 15 years) and then repeating that performance for the remainder of the prior time period (e.g., the entire 30 year period). Illustrations depicting a time period longer than 30 years (e.g., the Latest Annuity Date of age 95) will similarly derive back-tested performance through that process of repeating performance periods. Any money allocated to the Fixed Interest Account assumes the current Fixed Interest Account rate (Current Rate) is held constant for the period shown. In this illustration, we have not imposed any limit on the return that can be assumed for a given year.

- **Assumed rate (page 10 & 11)** Assumes a 4.00% index interest rate.

- **Interest Crediting and Accumulation Value Details for Each Allocated Interest Crediting Strategy (Page 12):** This scenario illustrates the values associated with each individual interest crediting strategy from the specific period scenario on.

PAST PERFORMANCE IS BASED ON HYPOTHETICAL HISTORICAL AND/OR BACK-TESTED DATA AND IS NO GUARANTEE OF FUTURE RESULTS. ACTUAL INTEREST CREDITING RESULTS WILL VARY BASED ON MARKET CONDITIONS, INDEX ALLOCATIONS, AND INTEREST PAR RATES, CAPS AND SPREADS, AS APPLICABLE. THE VALUES IN THIS ILLUSTRATION ARE NOT GUARANTEES OF OR EVEN ESTIMATES OF THE AMOUNTS YOU CAN EXPECT FROM YOUR ANNUITY.

*For more information about interest crediting strategies referenced in this illustration, please see the page in this illustration titled "Understanding Your Interest Crediting Strategy(ies)".

A look at the "range of potential outcomes"

To help you understand how varying index performance could impact the outcome of illustrated values shown (including any withdrawals, if applicable), we present a range of outcomes using the following specified scenarios (as defined on p. 4):

- **Minimum Rates (Page 6):** *Assumes a "0% Credited Interest and Minimum Declared Interest Rate (MDIR)" for the Fixed Interest Account.*
- **Specified Period (Page 8):** The figures in this illustration are based on the actual past performance of the index over the period depicted if the index has existed for the entirety of that period. If the index has not existed for the entire period, the actual or back tested performance may be repeated (for example, 10 years repeated three times to show 30 years). Illustrations depicting a time period longer than 30 years (e.g., the Latest Annuity Date of age 95) will similarly derive back-tested performance through that process of repeating performance periods. Any money allocated to the Fixed Interest Account assumes the current Fixed Interest Account rate(Current Rate) is held constant for the period shown. In this Ilustration, we have not imposed any limit on the return that can be assumed for a given year.
- **Assumed Rate (Page 10):** *"Assumes a 4.00% Index Interest Rate"*

This range of outcomes is highlighted in the charts to the right. The top chart shows the hypothetical Account Values and Income Bases for all 3 scenarios. The bottom chart displays the annual income amounts based on a 7.80% withdrawal rate at age 72.

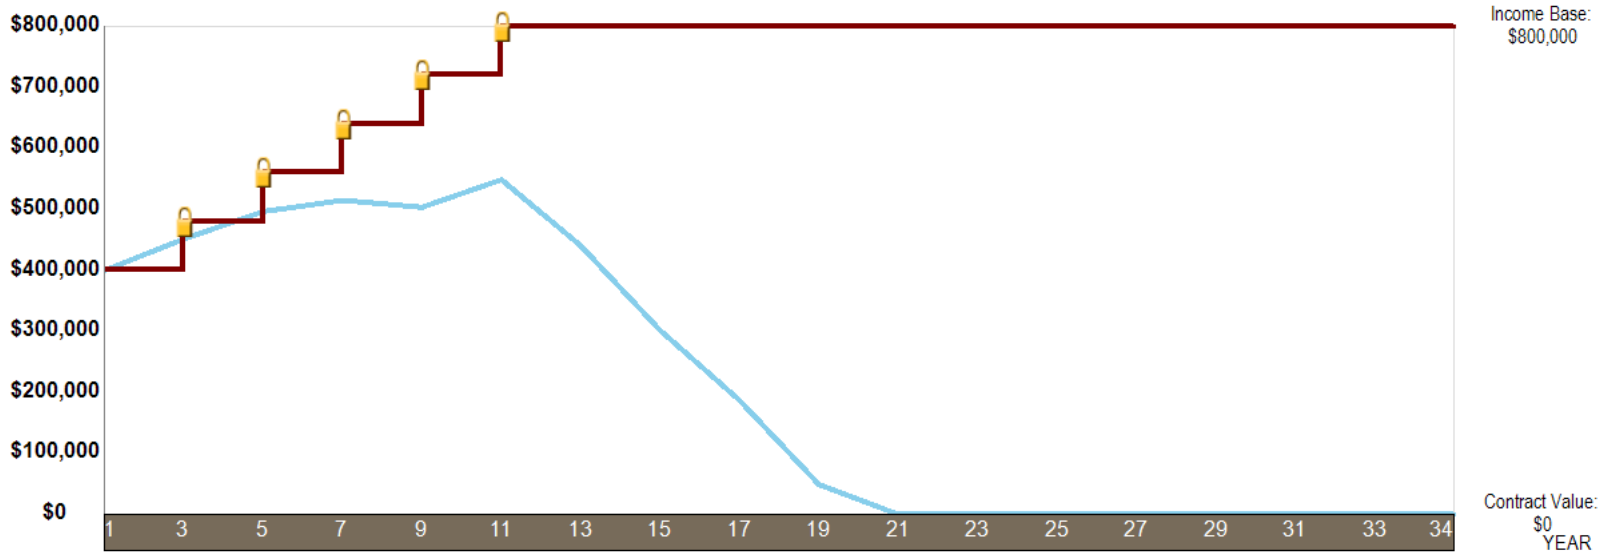
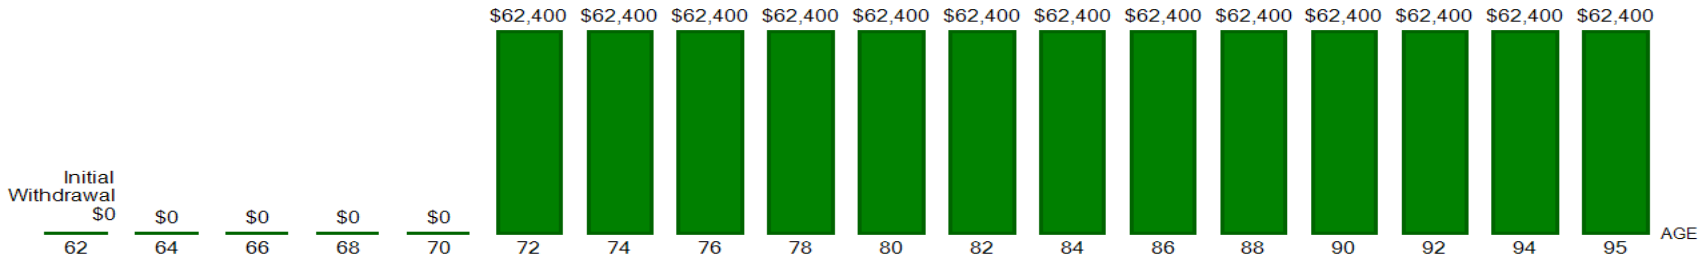
Lifetime Income Max can provide MORE GUARANTEED INCOME!



In this scenario, you would have received $1,497,600 in total income over 34 years.



If the contract value is completely depleted, you would receive the Protected Income Payment of $62,400 for life (7.80% of $800,000). Please see "Protected Income Payment" in Key Terms and Definitions for details on how this lifetime income is calculated.

CURRENT RATES HELD CONSTANT

Understanding Your Interest Crediting Strategy(ies)

Power Index Preferred Plus Income credits interest using up to 7 interest crediting strategies – 5 index interest accounts and a fixed interest account. These strategies are described below. The factors used in calculating index interest are subject to change at any time up until the contract is issued, as are both the current Initial Interest Rate and the Minimum Declared Interest Rate on the fixed interest account. The Initial Interest Rate, Index Rate, Cap(s), Spread, and Participation Rates as applicable, can be found on the Contract Data Page and/or Rider Data Page(s) of the contract, as applicable, along with the minimum and maximum guaranteed rates and values. Thereafter, interest rates and index account factors will be declared annually in advance of each contract anniversary and will be guaranteed for the following contract year.

Index interest accounts are not a permanent part of the contract and may be removed due to circumstances beyond AGL's control. Such circumstances include, but are not limited to, the discontinuation of an index, a change in the composition or calculation of an index, the inability to license the use of an index and the inability to hedge risks associated with these index interest accounts. Special rules govern how assets in a discontinued index interest account may be reallocated. These rules may differ by state. Please see the Owner Acknowledgment and Disclosure Statement for more information.

Understanding Your Interest Crediting Strategy(ies), continued

- **Franklin Quality Dividend Index Annual Point-to-Point Participation Rate:** This strategy credits index interest, if any, based on the percent change in the Franklin Quality Dividend Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **S&P Annual Point-to-Point with Cap:** This option credits calculated index interest every Contract Anniversary and is based on the percent change in the S&P500® Index over the one year period ending on that day. The annual index percent change, subject to declared Participation Rate, and Index Rate Cap, is the calculated rate of index interest for that Index Term. Interest for each Index Term is not earned until the end of that Index Term (on the Contract Anniversary). The rate of interest will never be less than zero.
- **S&P Annual Point-to-Point Participation Rate:** This option credits calculated index interest every Contract Anniversary and is based on the percent change in the S&P500® Index over the one year period ending on that day. The annual index percent change is subject to an annually declared Participation Rate and spread, and is the calculated rate of index interest for that Index Term. Interest for each Index Term is not earned until the end of that Index Term (on the Contract Anniversary). The rate of interest will never be less than zero.
- **MLSB Annual Point-to-Point Participation Rate (ML Strategic Balanced Index):** This strategy credits index interest, if any, based on the percent change in the MLSB Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **MSCI EAFE Annual Point-to-Point with Cap:** This option credits calculated index interest every Contract Anniversary and is based on the percent change in the MSCI EAFE Index over the one year period ending on that day. The annual index percent change, subject to declared Participation Rate, and Index Rate Cap, is the calculated rate of index interest for that Index Term. Interest for each Index Term is not earned until the end of that Index Term (on the Contract Anniversary). The rate of interest will never be less than zero.
- **Russell 2000® Annual Point-to-Point with Cap:** This option credits calculated index interest every Contract Anniversary and is based on the percent change in the Russell 2000® Index over the one year period ending on that day. The annual index percent change, subject to declared Participation Rate, and Index Rate Cap, is the calculated rate of index interest for that Index Term. Interest for each Index Term is not earned until the end of that Index Term (on the Contract Anniversary). The rate of interest will never be less than zero.
- **S&P Annual PTP Performance-Triggered:** This option credits interest every Contract Anniversary that is based on the percent change in the S&P500® Index over the one year period ending on that Contract Anniversary. The rate of interest credited will equal the Triggered Rate if the change in index value over the index term is equal to or greater than the minimum change in index value. Interest for each Index Term is not earned until the end of that Index Term. The rate of interest earned will never be less than zero.
- **Fixed Interest Account:** This option is a fixed-rate account with a 1-year term. Interest is credited daily on a compound basis to achieve the annual declared rate. The Fixed Interest Account initial interest rate is guaranteed for the first Contract Year. A new interest rate will be declared annually in advance of each contract anniversary and will be guaranteed for the following Contract Year.

Key Terms and Definitions

For the Interest Crediting Strategies

- **Index Term:** An Index Term is a period used to measure the change in the Index Prices for each Index Interest Account. At the end of the Index Term (i.e. on the contract anniversary), we may credit Index Interest. The initial Index Term for the Interest Index Accounts begins on the Contract Date. Subsequent Index Terms begin on the end date of the previous Index Term. The end date for an Index Term is on a Contract Anniversary.
- **S&P 500 Index:** It is an index of the stock of 500 publicly traded companies, without dividends. The S&P 500 Value on the Rider Effective Date is shown on the Rider Data Page. "S&P 500" means the value of the S&P 500 that is published by S&P at the close of each day that the S&P 500 is calculated
- The Invesco New Economy Index is a target volatility index, which seeks to provide strong risk adjusted returns while maintaining a 12.5% volatility target. The starting point of the index allocates to a combination of exchange traded products (ETPs) targeting a ratio of 80% innovation-focused equity exposure and 20% Bitcoin exposure.
- **ML Strategic Balanced Index®:** It is an index comprised of a dynamic combination of the S&P 500 Index, without dividends, and the Merrill 10 Year Treasury Futures Index (total return), with a 6% volatility target. The ML Strategic Balanced Index Value on the Rider Effective Date is shown on the Rider Data Page. "ML Strategic Balanced Index" means the value of the ML Strategic Balanced Index that is published by BofAMerrill Lynch at the close of each day that the ML Strategic Balanced Index is calculated. This index embeds an annual index cost in the calculations of the change in Index Value over the Index Term. This "embedded index cost" will reduce the change in Index Value that would otherwise have applied, and funds certain operational and licensing costs for the index. It is not a fee paid by you or received by the Company.

Column Heading Definitions

- **Index Annual Change:** represents the positive or negative change associated with the index for a given year. This change is the basis for the Interest Earned and Credited Interest rate associated with the interest crediting options illustrated.
- **Interest Earned and Credited Interest Rate:** In this report, Interest Earned on Index Accounts is the dollar amount of index interest earned and payable each year on amounts remaining in the Index Interest Account on the Contract Anniversary. It is based on the change in the index and factors used to calculate the Credited Interest Rate. Amounts in each index account on the contract anniversary are multiplied by the applicable Credited Interest Rate for that account. For the Fixed Interest Account MDIR, as well as Initial and subsequent annual declared rates, are credited and compounded daily to achieve the appropriate declared rate.

  For the Assumed Rate depiction, annual Credited Interest Rate is the Assumed Rate and Interest Earned does not reflect any index strategy, term, spread, cap rate or participation rate.
- **Participation Rate:** The Initial Participation Rate is set at contract issue and is guaranteed for one year or two years (depending on strategy selection). After the first (or second) Contract Year, subsequent Participation Rates are declared annually at the end of each Index Term (on the Contract Anniversary) and are guaranteed for the following contract year.
- **Index Rate Cap:** The Initial Index Rate Cap is set at contract issue and is guaranteed for one year. After the first Contract Year, subsequent Index Rate Caps are declared annually at the end of each Index Term (on the contract anniversary) and are guaranteed for the following year. Generally, each Interest Crediting Strategy has a corresponding Rate Cap.
- **Minimum Index Rate Cap:** A declared Index Rate Cap cannot be set lower than the applicable Minimum Index Rate Cap stated on the Rider Data Page.

Key Terms and Definitions Continued

■**Minimum Participation Rate:** A declared Participation Rate cannot be set lower than the Minimum Participation Rate stated on the Rider Data Page.

■**Contract Anniversary Value:** The contract value on the contract anniversary. This value reflects reduction of any applicable annual Rider Fees.

■**Death Benefit:** The amount payable upon death, which is the Contract Value or the Minimum Withdrawal Value, if greater.

■**Cash Surrender Value:** In this illustration, it represents what you would receive if you withdrew all your money at one time. This illustrated value is the greater of the Cash Surrender Value and the Minimum Withdrawal Value. The Cash Surrender Value is the contract value adjusted for all applicable withdrawal charges. Power Index Preferred Plus Income withdrawal charges decline over a period of seven years and the Minimum Withdrawal Value is equal to a percentage of your premium(s), less prior withdrawals (excluding any withdrawal charges and MVA), and currently set at 87.5%, accumulated at the Interest Rate for Minimum Withdrawal Values and currently set at 2.40%.

For the Lifetime Income Max Guaranteed Living Benefit Rider

■**Activation of Lifetime Income Max:** The decision to begin lifetime withdrawals under the rider. Activation must be requested in writing. At the time of activation, you will have an opportunity to make changes to the number of individuals covered under Lifetime Income Max. You can also change this coverage prior to activation under specific situations such as marriage, divorce or death.

■**Eligible Premiums:** Equal all premiums received during the first 30 days after the Rider Effective Date. Income Credits and Premium Enhancements are not included in the calculation of eligible purchase payments.

■**Income Base:** The value on which guaranteed lifetime income and the annual rider fee are based. The initial Income Base is equal to the Eligible Premiums received during the Modified Single Premium Period plus any applicable Premium Enhancements. It is also adjusted for withdrawals (prior to activation) and excess withdrawals (after activation). On each contract anniversary , the Income Base is automatically increased to the greater of the Highest Anniversary Value or the current Income Base increased by any available Income Credit. The Income Base is only a value used as a factor in calculating your Maximum Annual Withdrawal Amount ("MAWA"), Protected Income Payment ("PIP") and annual Rider Fee, it is not a liquidation value nor can it be taken as a lump sum.

■**Income Credit:** is the amount that may be added to your Income Base in each of the contract years prior to the Lifetime Income activation. The annual income credit is 10% of the Income Credit Base.

■**Income Credit Base:** A component of the calculation of the annual income credit. Initially, the Income Credit Base is equal to Eligible Premiums plus any applicable Premium Enhancements. The Income Credit Base will increase if the Income Base is increased as a result of a Highest Anniversary Value step-up. The Income Credit Base is not increased if your Income Base rises due to the addition of the Income Credit.

■**Income Credit Period:** The number of years the annual Income Credit is available. The Income Credit period ends on the Lifetime Income activation date.

■**Rider Fee:** There is a separate annual charge for the Lifetime Income Max rider equal to 1.00% of the Income Base. The charge is the same for single life or joint life payments.

■**Annual Income or MAWA:** The Lifetime Income Max rider's Maximum Annual Withdrawal Amount (MAWA), which is the maximum amount of income you can take each year (once the rider is activated) without affecting your Income Base and Income Credit Base. Prior to beginning lifetime income, you have the option to take withdrawals, but these withdrawals will impact the value of your Income Base and Income Credit Base. Please see the Owner Acknowledgment and Disclosure Statement for details. Withdrawals can begin as early as age 50. The MAWA percentage for withdrawals beginning at age 72 is:

- **7.80% of the Income Base** for Single Life (one covered person)
- **7.30% of the Income Base** for Joint Life (two covered persons)
  - ❖ Age is based on the age of the owner (older owner if the contract is jointly owned) for the Single Life option, or the age of the younger person for the Joint Life option. The MAWA percentage varies based on age at the time of activation for the first lifetime withdrawal. Please refer to the Owner Acknowledgement and Disclosure Statement for details.
  - ❖ **Excess Withdrawal:** The MAWA percentage may decrease if your contract value is depleted (see "Protected Income Payment"). Withdrawals that exceed the MAWA are considered "excess withdrawals" and will reduce the Income Base in the same proportion by which the contract value is reduced by the excess withdrawal. Withdrawals under the rider that do not exceed the MAWA in a contract year are not subject to withdrawal charges; however, excess withdrawals may be subject to the withdrawal charge schedule that begins at 8% and declines over 7 years. If you take an excess withdrawal that reduces the contract value to zero, the Lifetime Income Max feature will terminate and you will no longer be eligible to take withdrawals or receive lifetime income payments.

■**Protected Income Payment (PIP):** The amount of annual income you will receive for life if your contract value is depleted due to withdrawals taken within the feature's parameters and the Income Base is greater than zero. The Protected Income Payment percentage for withdrawals beginning at age 72 is:

- **7.80% of the Income Base** for Single Life (one covered person)
- **7.30% of the Income Base** for Joint Life (two covered persons)

Age is based on the age of the owner (older owner if the contract is jointly owned) for the Single Life option, or the age of the younger person for the Joint Life option, where there are two covered persons. The PIP percentage varies based on age at the time of first withdrawal. Please refer to the Owner Acknowledgement and Disclosure Statement for details.

■**Withdrawal Type – GMWB:** Represents the annual withdrawal amount being calculated based on the Income Base under the illustrated optional guaranteed living benefit.

■**Maturity Date:** The latest age, specified in your contract, by which if you have not already activated lifetime income under your living benefit, you must 1) begin receiving your lifetime income or either 2) surrender or 3) annuitize the contract (see Annuity Options below). If you do not select an option, we will automatically begin your lifetime income based on the values associated with your living benefit.

Key Terms and Definitions Continued

- **Annuity Options:** If you elect to annuitize the contract, available Annuity Options include payments for life only or life with period certain, either of which may be for single life or joint lives; a fixed period certain only; or any payment option that is mutually agreeable between you and the company.
- **Tax-qualified Plans:** This modified single premium product may not be appropriate for use with contributory IRAs (IRA, Roth and SEP) if you plan to make ongoing contributions. Also keep in mind, purchasing an annuity within a tax-qualified plan provides no additional tax-deferred benefit beyond that provided by the plan.
- **Additional Note on Cancellation:** If you find that the Lifetime Income Max optional feature is no longer right for you, you may cancel the feature on the 5th contract anniversary or any contract anniversary thereafter. Once cancelled, the feature cannot be re-elected. Keep in mind that the feature may be automatically terminated under certain circumstances, such as when the contract is annuitized or surrendered. Other circumstances may also apply.

S&P 500® and S&P® are registered trademarks of Standard and Poor's Financial Services LLC. The trademarks have been licensed to S&P Dow Jones Indices LLC and have been sublicensed for use for certain purposes by American General Life Insurance Company. The Power Index Preferred Plus Income is not sponsored, endorsed, sold, or promoted by Standard and Poor's Financial Services LLC, S&P Dow Jones Indices LLC, or their affiliates, and none of Standard and Poor's Financial Services LLC, S&P Dow Jones Indices LLC, or their affiliates makes any representation regarding the advisability of paying premiums for the Power Index Preferred Plus Income.

Merrill Lynch, Pierce, Fenner & Smith Incorporated and its affiliates ("BofA Merrill Lynch") indices and related information, the name BofA Merrill Lynch, and related trademarks, are intellectual property licensed from BofA Merrill Lynch, and may not be copied, used, or distributed without BofA Merrill Lynch's prior written approval. The products of licensee American General Life Insurance Company have not been passed on as to their legality or suitability, and are not regulated, issued, endorsed, sold, guaranteed, or promoted by BofA Merrill Lynch. BOFA MERRILL LYNCH MAKES NO WARRANTIES AND BEARS NO LIABILITY WITH RESPECT TO ANY INDEX, ANY RELATED INFORMATION, ITS TRADEMARKS, OR THE PRODUCT(S) (INCLUDING WITHOUT LIMITATION, ITS QUALITY, ACCURACY, SUITABILITY AND/OR COMPLETENESS).

All rights in the Russell 2000® Index (the "Index") vest in the relevant LSE Group company which owns the Index. "Russell®", "Russell 2000®", "FTSE®" "Russell®", and "FTSE Russell®" are trade mark(s) of the relevant LSE Group companies and are used by any other LSE Group company under license. "TMX®" is a trade mark of TSX, Inc. and used by the LSE Group under license.

The Index is calculated by or on behalf of FTSE International Limited or its affiliate, agent or partner. The LSE Group does not accept any liability whatsoever to any person arising out of (a) the use of, reliance on or any error in the Index or (b) the purchase of or operation of the "Product". The LSE Group makes no claim, prediction, warranty or representation either as to the results to be obtained from the "Product" or the suitability of the Index for the purpose to which it is being put by AGL.

The product referred to herein is not sponsored, endorsed, or promoted by MSCI, and MSCI bears no liability with respect to any such product or any index on which such product is based. The contract contains a more detailed description of the limited relationship MSCI has with Licensee and any related product.

The Franklin Quality Dividend ("FQD") Index has been developed and is owned solely by QS Investors LLC, a subsidiary of Franklin Resources, Inc. Neither Blackrock (the sponsor of iShares ETFs) nor Invesco is affiliated with Franklin Resources, Inc. and QS Investors, LLC. FQD and any security or product based on or making use of FQD are not sponsored, endorsed, or promoted by Blackrock or Invesco, and neither company bears any responsibility or liability for or with respect to FQD or any security or product based on or making use of FQD.

FQD is calculated on behalf of QS Investors, LLC by Solactiveor its affiliate, agent or partner. Solactive, QS Investors, LLC, Franklin Resources, Inc. and their respective affiliates do not make any claim, prediction, warranty or representation as to the accuracy and completeness of FQD, the results to be obtained from use of FQDI or the suitability of FQD for the purpose to which it is being put by American General Life Insurance Company, and bear no liability for FQD or for any security or product based on or making use of FQD.

FQD embeds an annual index cost in the calculations of the change in index value. This embedded index cost will reduce any change in index value, and it funds certain operational and licensing costs for the Index. Since it will affect the return of the Index, it may also impact the amount of interest credited to an index annuity; however, it is not a fee paid by the policy owner or received by the issuing insurance company.

Additional information about annuities

Index annuities are not a direct investment in the stock market. They are long-term insurance products with guarantees backed by the claims-paying ability of the issuing insurance company. They provide the potential for interest to be credited based in part on the performance of the specified index, without the risk of loss of premium due to market downturns or fluctuations. Index annuities may not be suitable or appropriate for all clients.

Keep in mind, if your premium is tax-qualified (such as an IRA), an annuity provides no additional tax-deferred benefit beyond that provided by the plan. You should only use a fixed index annuity in a tax qualified plan if you want to benefit from features other than tax deferral. Please consult with your financial and tax advisor regarding your individual situation. If you elect the income benefit, the fee reduces the contract value on an annual basis. As a result, in prolonged down markets, you could lose your premium. Guarantees are backed by the claims paying ability of the issuing insurance company.
