A Powerful Solution for Your Retirement Income Needs

Power Select Advisory℠ Annuity
with Lifetime Income Plus Multiplier Flex℠

A hypothetical fixed-index annuity illustration prepared for:

Valued Client

Prepared by:

Valued Client
Texas
719-442-6400
719-442-6401

Solicitation State: Texas

Date prepared: 4/3/2024

This illustration is hypothetical and is intended solely to depict how different crediting strategies and rates can affect the annuity's contract value and contractual benefits including any optional features selected. This illustration is only valid in solicitation state. Interest rates, index factors, fees and other assumed values are not guaranteed and can be changed by the company prior to the date your contract is issued. Actual results may therefore be higher or lower than shown. Your Minimum Declared Interest Rate (applicable only to the Fixed Interest Account) and other guarantees will be stated in your contract. Please be sure to read the additional disclosure at the end of the illustration. This material is intended only for educational purposes to help you, with the guidance of your financial advisor, make informed decisions. We are not a fiduciary and do not provide investment advice or recommendations.

THIS IS AN ILLUSTRATION ONLY. AN ILLUSTRATION IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE. INTEREST RATES, DIVIDENDS, OR VALUES THAT ARE SET FORTH IN THE ILLUSTRATION ARE NOT GUARANTEED, EXCEPT FOR THOSE ITEMS CLEARLY LABELED AS GUARANTEED.

The purchase of a fixed index annuity is not required for, and is not a term of, the provision of any banking service or activity.

Not FDIC or NCUA/NCUSIF Insured
May Lose Value • No Bank or Credit Union Guarantee **Not a Deposit • Not Insured by any Federal Government Agency**

THIS ILLUSTRATION IS NOT COMPLETE UNLESS ALL PAGES ARE INCLUDED.

Issued By **American General Life Insurance Company**

By purchasing the Power Select Advisory, you can benefit from:

- **GROWTH** potential through index crediting strategies

  Access a range of strategies designed to help accumulate more assets for retirement income.

- **INCOME** that's guaranteed for life

  Take advantage of lifetime income options, such as Lifetime Income Plus Multiplier Flex, available for an additional annual fee. Or you can choose annuitization, a process that can convert your contract into lifetime income payments at no additional cost.

- **PROTECTION** against current taxes

  Through the power of tax deferral, you pay no current income tax on any gains until they're withdrawn.

This hypothetical illustration is provided to give you a feel for the interest crediting that would result from each of the interest crediting strategies based on the history or back-tested history of the related indexes. Allocating money to these options does not represent an investment directly into the index. Power Select Advisory offers interest accounts, each with a different interest crediting strategy, see Understanding Your Interest Crediting Strategies. These accounts are subject to change until the contract is issued and once issued, they may be discontinued or changed with prior notice.

• Fees and Charges. The Lifetime Income Plus Multiplier Flex illustration uses an annual fee rate of 1.10% of the income base for Single Life and Joint Life. There are no withdrawal charges. However, a market value adjustment ("MVA") applies to any amounts withdrawn above the 10% annual MVA free withdrawal amount during the first seven years, unless one of the early withdrawal MVA waivers applies under the Terminal Illness Rider or Extended Care Rider (included at no charge). The MVA may be positive or negative. Generally, if interest rates have risen, the MVA will decrease the amount you receive due to a withdrawal. If interest rates fall, the MVA will increase the amount you receive. The illustrated scenarios within this report do not present the potential positive or negative impact of an MVA.

If the following illustration has any allocation to the Fixed Interest Account, it will present values using the Minimum Declared Interest Rate (MDIR). The illustrated MDIR may not be the MDIR you actually receive since it is subject to change at any time up until the contract is issued. Once your contract is issued, however, the MDIR applicable to the Fixed Interest Account, if available, will never change. Additionally, the MDIR is guaranteed never to be less than 1.00 %. MDIR is stated on the Contract Data Page and once the contract is issued, is in effect for the life of the contract.

It is likely that the index will not repeat historical performance, the current declared factors and rates will change and actual values therefore will be higher or lower than those in this illustration. However, they will never be less than the minimum guarantees set forth in your contract.

Lifetime Income Plus Multiplier Flex can provide guaranteed lifetime income for as long as you live with the flexibility to take income prior to activating the rider and beginning lifetime withdrawals. The maximum annual withdrawal amount (MAWA) percentage of the Income Base that you receive for life depends on the number of people covered and the covered person(s) age(s) at the time of activation of lifetime withdrawals. Lifetime Income Plus Multiplier Flex locks in an annual income credit equal to the credited interest rate multiplied by a 200% multiplier provided no withdrawals have been taken. When lifetime withdrawals are taken within the parameters of the feature, the multiplier is adjusted to 100% for the life of the rider. You even have the opportunity to change the number of individuals covered under the rider (Single or Joint Life) to help meet varying income needs, or to address life events like marriage, divorce or death of a spouse. Please see key terms and definitions for more details.

Annuities are designed for long-term retirement savings and offer tax deferral. Withdrawals of taxable amounts are subject to ordinary income tax and, if taken prior to age 59½, a 10% federal tax penalty may apply. Partial withdrawals may reduce benefits available under the contract as well as the amount available upon a full surrender. Early withdrawals may also be subject to an MVA. Keep in mind, if your premium is tax-qualified (such as an IRA), an annuity provides no additional tax-deferred benefit beyond that provided by the plan. You should only use a fixed-index annuity in a tax-qualified plan if you want to benefit from features other than tax deferral. Please consult with your financial and tax advisor regarding your individual situation. If you elect the income benefit, the fee reduces the contract value on an annual basis. This means that in prolonged down markets you could lose premium. **Guarantees are backed by the claims paying ability of the issuing insurance company.**

Please read the Owner Acknowledgement and Buyer's Guide that will be presented to you when you purchase your annuity for more detailed information not included in this hypothetical illustration.

What you should know about the indices underlying our Index Crediting Strategies

The **S&P 500® Index*** includes 500 of the leading companies in the U.S. stock market. It is widely regarded as the standard for measuring U.S. stock market performance. When allocating money to an interest crediting option that uses this index in the calculation of interest, a key consideration for the performance of the S&P 500® index (excluding dividends) is the change in the value of the Index from the beginning of the index term to its end.

The **MSCI EAFE Index*** is designed to represent the performance of large- and mid-cap securities across 21 developed markets in Europe, Australasia, Far East, excluding the US & Canada. As of September 2018, it had more than 900 constituents and covered approximately 85% of the free float-adjusted market capitalization in each country.

The **AB All Market Index℠** provides systematic, rules-based access to the performance of several global equity and fixed income markets. The index seeks to equally distribute risk to equities and fixed income, and to several sub regions and sectors therein. The index will utilize a proprietary momentum signal to drive its asset allocation. To help manage overall return volatility, the index will systematically utilize a volatility targeting mechanism.

The **Dimensional US Foundations Index** is a rules-based multi-asset index that aims to provide higher expected returns in each asset class by leveraging Dimensional' s 40+ years of experience in financial science research and application. The Index allocates exposure on a daily basis among Equities, Fixed Income, and Commodities with a 5% volatility target using a combination of forward-looking implied volatility measures informed by joint research of Dimensional with Nobel Prize Laureate Robert C. Merton and truVol® from Salt Financial, which uses historical intraday data.

*The returns for these indices do not include dividends. This means that dividends paid on the securities underlying these indices are not included in the index return for each index, and index interest therefore will not reflect the higher returns that would apply if dividends were included.

Important Information Regarding Back-Tested Performance of the : Past performance of these indices, including but not limited to hypothetical performance, is not an indication of future results. Back-tested performance is not actual historical performance, but is hypothetical. The back-test calculations are based on the same methodology that is used in the calculation of the index today. Prospective application of the methodology used to construct these indices may not result in performance that corresponds to the back-tested returns shown. The back-test period does not correspond to the entire available history of the index.
Another limitation of back-tested hypothetical information is that, generally, the back-tested calculation is prepared with the benefit of hindsight. Back-tested data reflects the application of the index methodology and selection of index constituents in hindsight. No hypothetical record can completely account for the impact of financial risk attached to real-world events. For example, there are numerous factors related to the equities, fixed income, in general which cannot be, and have not been, accounted for in the preparation of the index information set forth, all of which can affect actual performance.

The following illustrations reflect the pre-inception performance data of the based on hypothetical back-tested closing values. Back-testing periods illustrated vary as described. The AB All Market Index℠ became available on 12/12/2019 and the illustration will be based on back-tested data prior to the inception date. The Dimensional US Foundations Index (DFA US) became available on 09/30/2022 and the illustration will be based on back-tested data prior to the inception date.

Please note: Some states do not permit the use of back tested performance in illustrations, even though the Interest Crediting options are available within the annuity product.

Not all Indices and Interest Crediting Strategies may be available through your firm. Please check with your agent.

This illustration includes the following hypothetical performance scenarios

Guaranteed Values (Minimum Rates)

- **0% Credited Interest and Fixed Interest Account Minimum Declared Interest Rate (MDIR) (Page 7 & 8):** This scenario reflects minimum contract values for the specified time period. It assumes that any money allocated to an Interest Crediting Strategy credits zero percent interest and any money allocated to the Fixed Interest Account earns the currently applicable MDIR, held constant for the time period.

Non-Guaranteed Values (Current Rates) - The benefits and values are not guaranteed

- **Specific Period (Page 9 & 10):** For this scenario, any money allocated to the S&P 500-based Interest crediting strategies is illustrated using the historical performance of the last 30 years of the S&P 500 index and the most recent 15 years of back-tested performance repeated twice for the MLSB, AB, DFA US, and PIMCO indices. In some states we are not permitted to illustrate the MLSB, AB, DFA US, and PIMCO indices because they contain less than 10 years of actual history. Any money allocated to the Fixed Interest Account assumes the current Fixed Interest Account rate (Current Rate) held constant for the period shown.

  Note for scenarios that illustrate beyond 30 years, the illustration will repeat the most recent 10 year period until reaching the Latest Annuity Date "LAD" of age 95.

- **Non Guaranteed – Assumed Rate (Page 11):** This scenario reflects a hypothetical constant assumed rate selected for the illustrated period. This rate is not likely to occur, and actual rates and results may be more or less favorable than those shown. This scenario does not reflect any index strategy, term, spread, cap rate or participation rate.

- **Interest Crediting and Accumulation Value Details for Each Allocated Interest Crediting Strategy (Page 12):** This scenario illustrates the values associated with each individual interest crediting strategy from the specific period scenario on the previous page.

- **Optional Non-Guaranteed - Favorable and Unfavorable Periods (Page 14 & 15):** This scenario uses performance from the 10 best consecutive years out of the last 20 years to create a "Most Favorable" illustration scenario, and the performance from the 10 worst consecutive years out of the last 20 years to create a "Least Favorable" illustration scenario. This scenario assumes that the premiums allocated to an Interest Crediting Strategy or the Fixed Interest Account is illustrated using the current caps, spreads and Fixed Interest Account rates. These scenarios reflect hypothetical contract values for the specified time period, based on historical index performance, current declared index factors, and the current initial Fixed Interest Account interest rate and other current values held constant for the time period.

PAST PERFORMANCE IS BASED ON HYPOTHETICAL HISTORICAL DATA AND IS NO GUARANTEE OF FUTURE RESULTS. ACTUAL INTEREST CREDITING RESULTS WILL VARY BASED ON MARKET CONDITIONS, INDEX ALLOCATIONS, AND INTEREST PAR RATES, CAPS AND SPREADS, AS APPLICABLE. THE VALUES IN THIS ILLUSTRATION ARE NOT GUARANTEES OF OR EVEN ESTIMATES OF THE AMOUNTS YOU CAN EXPECT FROM YOUR ANNUITY.

IMPORTANT NOTICE

Basic Facts about Index Annuities

- Index annuities are long-term contracts
- You do not invest directly in the securities and other investments comprising the index
- Index interest is not guaranteed
- Factors determining degree of participation in index performance (e.g., caps) may limit interest earned, can be reset each index term, and can be lower in future periods
- Contracts with living benefits have rider fees that reduce contract value as long as rider is in effect; deduction of these fees reduces amount of interest you derive from the index option
- Constituent investments in a "dynamic" index can change over time based on the guiding index strategy, and there is no guarantee that such changes will produce positive performance or will mirror changes in essentially static indices like the S&P 500

An important word about the assumptions underlying the illustrated values and how illustrations are merely hypothetical

First, it is important to note that hypothetical illustrations are intended to help you understand how this annuity product works in broad terms. In general, actual and/or back-tested performance of the index crediting strategies is utilized, and these figures are combined with current crediting rates in order to demonstrate a potential performance path. [1] Many different factors will cause your actual performance to differ from the illustrated outcomes, such as Index performance, initial participation and crediting rates, renewal rates and any withdrawals taken. It is important to note that **this illustration is not a promise of future returns or results.**

Further, we want to highlight some important factors that impact this illustration and should be understood:

- Historical Performance: Generally, market performance during the 2010's was particularly strong, and this illustration utilizes much of the performance from that time period. While that type of performance could continue, past performance is not indicative of future results, and different volatility and/or interest rate environments can result in different performance results of any index in the future.
- Rising Interest Rates: As interest rates increase, participation rates and other crediting rates we offer generally can be higher than when interest rates are significantly lower. Higher crediting rates provide you with a greater opportunity for higher interest credits in the future, but still could result in zero interest credits if the underlying index performance is not positive.
- Decreasing Interest Rates: As interest rates decrease, participation rates and other crediting rates we offer generally decline. Lower crediting rates provide you with less opportunity than during higher interest rate periods, but still could result in zero interest credits if the underlying index performance is not positive.

Also be aware that current crediting rates are held constant for the entire period reflected in the illustration. Please keep in mind that your actual crediting rates can change (lower or higher) as frequently as annually and will impact the actual outcome.

Therefore, as you work with your financial professional to determine what is best for you, please be mindful of this information and do not overly rely upon the illustrated outcomes when setting your expectations for future results. Your actual results will be determined based on the future performance of the index you choose AND the initial and renewal crediting rates set on the annuity, among other factors.

[1] Back-tested performance applies the index methodology to historical performance in instances where the index crediting strategy has not been in existence for as long as the illustrated period.

I-HYIN (10/22)

A look at the "range of potential outcomes"

To help you understand how varying index performance could impact the outcome of illustrated values shown (including any withdrawals, if applicable), we present a range of outcomes using the following three specified scenarios (as defined on p. 4):

- **Minimum Rates (Page 7):** *Assumes a "0% Credited Interest and Fixed Interes Account Minimum Declared Interest Rate (MDIR)".*
- **Current Rates (Page 9):** *Assumes a "Specific period" for the illustrated index or indices using current crediting rates held constant. The hypothetical returns assume that the currently applicable rates applied to index performance (e.g., participation rate; cap rate) remain unchanged during the entire illustrated period. In actual practice, those rates can change annually.*
- **Assumed Rate (Page 11):** *"3.00% Assumed Index Interest Rate"*

These range of outcomes are highlighted in the charts to the right. The top chart shows the hypothetical Account Values and Income Bases for all 3 scenarios. The bottom chart displays the annual income amounts based on a 6.10% withdrawal rate at age 67.

For the hypothetical specific period index performance shown on page 9, we use back-tested index Performance and, when available, historical performance. Back-tested performance (explained in more detail on page 3) is a way of generating hypothetical performance for a period when an index was not yet available. It gives you an indication of how the annuity would have performed by applying the index methodology to historical data. For back-tested performance we use the most recent 15 years repeated to show 30 years.

The goal in providing this information is to give you a more complete overview of how the annuity could perform over time. Since the outcome is based in part on the performance of an index, there is no guarantee as to Contract Value or lifetime income growth, and the actual value of your contract and the lifetime income you'll receive will differ.

Hypothetical Values - Current Rates	Hypothetical Guaranteed Retirement Income	Legacy

This scenario assumes that the amount of each of the elements affecting the interest you earn (e.g., the triggered rate percentage) remain unchanged for the entire time period illustrated. In fact, the amount of each element is guaranteed only for the initial rate term and is likely to change over time. Thus, actual results may be more or less favorable than those shown.

Understanding Your Interest Crediting Strategy(ies)

Power Select Advisory credits interest using up to six (6) interest crediting strategies – five (5) index interest accounts and a fixed interest account. These strategies are described below. The factors used in calculating index interest are subject to change at any time up until the contract is issued, as are both the current Initial Interest Rate and the Minimum Declared Interest Rate on the fixed interest account. The Initial Interest Rate, Index Rate, Performance Triggered Rate, Cap(s), Spread, and Participation Rates as applicable, can be found on the Contract Data Page and/or Rider Data Page(s) of the contract, as applicable, along with the minimum and maximum guaranteed rates and values. Thereafter, interest rates and index account factors will be declared annually in advance of each contract anniversary and will be guaranteed for the following contract year.

Index interest accounts are not a permanent part of the contract and may be removed due to circumstances beyond AGL's control. Such circumstances include, but are not limited to, the discontinuation of an index, a change in the composition or calculation of an index, the inability to license the use of an index and the inability to hedge risks associated with these index interest accounts. Special rules govern how assets in a discontinued index interest account may be reallocated. These rules may differ by state. Please see the Owner Acknowledgment and Disclosure Statement for more information.

Understanding Your Interest Crediting Strategy(ies), continued

- **AB All Market Annual Point-to-Point Participation Rate (AB All Market Index):** This strategy credits index interest, if any, based on the percent change in the AB All Market Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **S&P Annual Point-to-Point with Cap:** This option credits calculated index interest every Contract Anniversary and is based on the percent change in the S&P500® Index over the one year period ending on that day. The annual index percent change, subject to declared Participation Rate, and Index Rate Cap, is the calculated rate of index interest for that Index Term. Interest for each Index Term is not earned until the end of that Index Term (on the Contract Anniversary). The rate of interest will never be less than zero.
- **MSCI EAFE Annual Point-to-Point with Cap:** This option credits calculated index interest every Contract Anniversary and is based on the percent change in the MSCI EAFE Index over the one year period ending on that day. The annual index percent change, subject to declared Participation Rate, and Index Rate Cap, is the calculated rate of index interest for that Index Term. Interest for each Index Term is not earned until the end of that Index Term (on the Contract Anniversary). The rate of interest will never be less than zero.
- **Dimensional US Foundations (DFA US Foundations) Annual Point-to-Point Participation Rate:** This strategy credits index interest, if any, based on the percent change in the Dimensional US Foundations (DFA US Foundations) Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **S&P Annual PTP Performance-Triggered:** This option credits interest every Contract Anniversary that is based on the percent change in the S&P500® Index over the one year period ending on that Contract Anniversary. The rate of interest credited will equal the Triggered Rate if the change in index value over the index term is equal to or greater than the minimum change in index value. Interest for each Index Term is not earned until the end of that Index Term. The rate of interest earned will never be less than zero.
- **Fixed Interest Account:** This option is a fixed-rate account with a 1-year term. Interest is credited daily on a compound basis to achieve the annual declared rate. The Fixed Interest Account initial interest rate is guaranteed for the first Contract Year. A new interest rate will be declared annually in advance of each contract anniversary and will be guaranteed for the following Contract Year.

Key Terms and Definitions

For the Interest Crediting Strategies

- **Index Term:** An Index Term is a period used to measure the change in the Index Prices for each Index Interest Account. At the end of the Index Term (i.e. on the contract anniversary), we may credit Index Interest. The initial Index Term for the Interest Index Accounts begins on the Contract Date. Subsequent Index Terms begin on the end date of the previous Index Term. The end date for an Index Term is on a Contract Anniversary.
- **S&P 500 Index:** It is an index of the stock of 500 publicly traded companies, without dividends. The S&P 500 Value on the Rider Effective Date is shown on the Rider Data Page. "S&P 500" means the value of the S&P 500 that is published by S&P at the close of each day that the S&P 500 is calculated

Column Heading Definitions

- **Index Annual Change:** represents the positive or negative change associated with the index for a given year. This change is the basis for the Interest Earned and Credited Interest rate associated with the interest crediting options illustrated.
- **Interest Earned and Credited Interest Rate:** In this report, Interest Earned on Index Accounts is the dollar amount of index interest earned and payable each year on amounts remaining in the Index Interest Account on the Contract Anniversary. It is based on the change in the index and factors used to calculate the Credited Interest Rate. Amounts in each index account on the contract anniversary are multiplied by the applicable Credited Interest Rate for that account. For the Fixed Interest Account MDIR, as well as Initial and subsequent annual declared rates, are credited and compounded daily to achieve the appropriate declared rate.

  For the Assumed Rate depiction, annual Credited Interest Rate is the Assumed Rate and Interest Earned does not reflect any index strategy, term, spread, cap rate or participation rate.
- **Participation Rate:** The Initial Participation Rate is set at contract issue and is guaranteed for one year or two years (depending on strategy selection). After the first (or second) Contract Year, subsequent Participation Rates are declared annually at the end of each Index Term (on the Contract Anniversary) and are guaranteed for the following contract year.
- **Index Rate Cap:** The Initial Index Rate Cap is set at contract issue and is guaranteed for one year. After the first Contract Year, subsequent Index Rate Caps are declared annually at the end of each Index Term (on the contract anniversary) and are guaranteed for the following year. Generally, each Interest Crediting Strategy has a corresponding Rate Cap.
- **Minimum Index Rate Cap:** A declared Index Rate Cap cannot be set lower than the applicable Minimum Index Rate Cap stated on the Rider Data Page.
- **Minimum Participation Rate:** A declared Participation Rate cannot be set lower than the Minimum Participation Rate stated on the Rider Data Page.
- **Contract Anniversary Value:** The contract value on the contract anniversary. This value reflects reduction of any applicable annual Rider Fees.
- **Death Benefit:** The amount payable upon death, which is the Contract Value or the Minimum Withdrawal Value, if greater.
- **Cash Surrender Value:** In this illustration, it represents what you would receive if you withdrew all your money at one time. This illustrated value is the greater of the Cash Surrender Value and the Minimum Withdrawal Value. The Cash Surrender Value is the contract value, adjusted by any applicable MVA. The Minimum Withdrawal Value is equal to a percentage of your premium(s), less any net withdrawals, currently set at 87.5 % accumulated at the Interest Rate for Minimum Withdrawal Values currently set at at 3.00 %.
- **MVA Duration:** The 7-year period during which a Market Value Adjustment (MVA) may be applied to increase or decrease the amount withdrawn.

For the Lifetime Income Plus Multiplier Flex Guaranteed Living Benefit Rider

Key Terms and Definitions Continued

- **Activation of Lifetime Income Plus Multiplier Flex:** The decision to begin lifetime withdrawals under the rider. Activation must be requested in writing. At the time of activation, you will have an opportunity to make changes to the number of individuals covered under Lifetime Income Plus Multiplier Flex. You can also change this coverage prior to activation under specific situations such as marriage, divorce or death.
- **Eligible Premiums:** Equal all premiums received during the first 30 days after the Rider Effective Date. Income Credits and Premium Enhancements are not included in the calculation of eligible purchase payments.
- **Income Base:** Is the value on which guaranteed lifetime income and the annual rider fee are based. The initial Income Base is equal to the Eligible Premiums received during the Modified Single Premium Period plus any applicable Premium Enhancements. It is also adjusted for withdrawals (prior to activation) and excess withdrawals (after activation). On each contract anniversary the Income Base is automatically increased to the greater of the Highest Anniversary Value or the current Income Base increased by the available Income Credit, if any. The Income Base is only a value used as a factor in calculating your Maximum Annual Withdrawal Amount ("MAWA") and Protected Income Payment and annual Rider Fee. It is not a liquidation value nor can it be taken as a lump sum.
- **Income Credit:** Is a percentage of the Income Credit Base that may be added to your Income Base each contract year. The annual gross Income Credit is equal to the Income Credit Base multiplied by the result of multiplying the credited interest rate by a 200% multiplier. When withdrawals are taken within the parameters of the feature, the multiplier is adjusted to 100% for the life of the rider.
- **Income Credit Base:** Is a component of the calculation of the annual income credit and initially equal to your premiums. Thereafter, at each contract anniversary, until the first withdrawal is taken after activation of the Lifetime Income, the income credit base is automatically increased to the highest anniversary value if the income base is increased to the highest anniversary value. However, the income credit base is not increased if an income credit is added to the income base. After taking your first Lifetime Income Withdrawal from the contract, the income credit base is increased to be equal to the income base and will remain equal to the income base thereafter. The income credit base is decreased proportionately due to the adjustments for excess withdrawals.
- **Income Credit Period:** Is the number of years the annual Income Credit is available. It is defined as the earlier of contract value depletion or Latest Annuity Date.
- **Rider Fee:** There is a separate annual charge for the Lifetime Income Plus Multiplier Flex rider equal to 1.10% of the Income Base. The charge is the same for single life or joint life payments.
- **Annual Income or MAWA:** The Lifetime Income Plus Multiplier Flex rider's Maximum Annual Withdrawal Amount (MAWA), which is the maximum amount of income you can take each year (once the rider is activated) without affecting your Income Base and Income Credit Base. Prior to beginning lifetime income, you have the option to take withdrawals, but these withdrawals will impact the value of your Income Base and Income Credit Base. Please see the Owner Acknowledgment and Disclosure Statement for details. Withdrawals can begin as early as age 50. The MAWA percentage for withdrawals beginning at age 67 is:
  - **6.60 % of the Income Base** for Single Life (one covered person)
  - **6.10 % of the Income Base** for Joint Life (two covered persons)
    - Age is based on the age of the owner (older owner if the contract is jointly owned) for the Single Life option, or the age of the younger person for the Joint Life option. The MAWA percentage varies based on age at the time of activation for the first lifetime withdrawal. Please refer to the Owner Acknowledgement and Disclosure Statement for details.
    - **Excess Withdrawal:** The MAWA percentage may decrease if your contract value is depleted (see "Protected Income Payment"). Withdrawals that exceed the MAWA are considered "excess withdrawals" and will reduce the Income Base and Income Credit Base in the same proportion by which the contract value is reduced by the excess withdrawal. This means that excess withdrawals reduce any future available income credit and that future income may therefore be lower. Withdrawals under the rider during the MVA Duration Period that do not exceed the MAWA in a contract year are not subject to an MVA; however, excess withdrawals taken during the MVA Duration period may be subject to an MVA. If you take an excess withdrawal that reduces the contract value to zero, the Lifetime Income Plus Multiplier Flex feature will terminate and you will no longer be eligible to take withdrawals or receive lifetime income payments.
- **Protected Income Payment (PIP):** The amount of annual income you will receive for life if your contract value is depleted due to withdrawals taken within the feature's parameters and the Income Base is greater than zero. The Protected Income Payment percentage for withdrawals beginning at age 67 is:
  - **6.60 % of the Income Base** for Single Life (one covered person)
  - **6.10 % of the Income Base** for Joint Life (two covered persons)

  Age is based on the age of the owner (older owner if the contract is jointly owned) for the Single Life option, or the age of the younger person for the Joint Life option, where there are two covered persons. The PIP percentage varies based on age at the time of first withdrawal. Please refer to the Owner Acknowledgement and Disclosure Statement for details.
- **Withdrawal Type – GMWB:** Represents the annual withdrawal amount being calculated based on the Income Base under the illustrated optional guaranteed living benefit.
- **Maturity Date:** The latest age, specified in your contract, by which if you have not already activated lifetime income under your living benefit, you must 1) begin receiving your lifetime income or either 2) surrender or 3) annuitize the contract (see Annuity Options below). If you do not select an option, we will automatically begin your lifetime income based on the values associated with your living benefit.
- **Annuity Options:** If you elect to annuitize the contract, available Annuity Options include payments for life only or life with period certain, either of which may be for single life or joint lives; a fixed period certain only; or any payment option that is mutually agreeable between you and the company.
- **Performance-Triggered Rate:** A rate of interest declared each index term that will be credited to an index interest account when the change in index value over the index term matches or exceeds the minimum change in index value (i.e., when the declared index interest percentage is "triggered" for that index term). The declared index interest percentage applicable for each index term will never be lower than the stated minimum in your contract.

  Minimum Performance-Triggered Rate – A declared Performance Triggered Rate cannot be set lower than the Minimum Performance Triggered Rate stated on the Rider Data Page.

  Minimum Change in Index Value: The Minimum Change in Index Value is set for the life of the contract once issued. If the index change is equal to or greater than the Minimum Change in Index Value, which is currently set at 0.00%, the Performance Triggered Rate will be credited.

Key Terms and Definitions Continued

- **Tax-qualified Plans:** This modified single premium product may not be appropriate for use with contributory IRAs (IRA, Roth and SEP) if you plan to make ongoing contributions. Also keep in mind, purchasing an annuity within a tax-qualified plan provides no additional tax-deferred benefit beyond that provided by the plan.
- **Additional Note on Cancellation:** If you find that the Lifetime Income Plus Multiplier Flex optional feature is no longer right for you, you may cancel the feature on the 5th contract anniversary or any contract anniversary thereafter. Once cancelled, the feature cannot be re-elected. Keep in mind that the feature may be automatically terminated under certain circumstances, such as when the contract is annuitized or surrendered. Other circumstances may also apply.

The AB All Market Index℠ is a service mark owned by Alliance Bernstein L.P. ("AB"), and has been licensed to American General Life Insurance Company ("Licensee"). The index annuity product to which this disclosure applies (the "Product") has been developed solely by Licensee. The Product is not sponsored, endorsed, or promoted by AB, and AB bears no liability with respect to the Product or any index on which such Product is based. AB does not provide investment advice to the Product or Licensee, and in no event shall any contract owner of the Product be deemed to be a client of AB. The prospectus, contract, policy or other similar governing document contains a more detailed description of the limited relationship AB has with Licensee and any related product.

The Dimensional US Foundations Index (the "Index") is sponsored and published by Dimensional Fund Advisors LP ("Dimensional"), which has contracted with Salt Financial LLC ("Salt") (each of Dimensional and Salt, an "IP Provider", and which shall include each of their respective directors, officers, employees, representatives, delegates or agents) to provide intellectual property (the "IP") that is used by Dimensional in connection with the maintenance and calculation of the Index. The use of "Dimensional" in the name of the Index and the related stylized mark(s) are service marks of Dimensional and have been licensed for use by American General Life Insurance Company ("AGL"). AGL has entered into a license agreement with Dimensional providing for the right to use the Index and related trademarks in connection with the Index Annuity (the "Financial Product"). The Financial Product is not sponsored, Endorsed, sold or promoted by any IP Provider, and no IP Provider makes any representation regarding the advisability of investing in such Financial Product. No IP Provider gives any express or implied Warranties, including, but not limited to, any warranties of Merchantability or fitness for a particular purpose or use. No IP Provider guarantees the accuracy, timeliness or completeness of the Index or the IP, as applicable, or any data included therein or the calculation thereof Or any communications with respect thereto, as the case may be, and each has no liability for any errors, omissions or interruptions therein. In no event shall any IP Provider have any liability of whatever nature for any losses, damages, costs, claims and expenses (including any special, punitive, direct, indirect or consequential damages (including lost profits)) arising out of matters relating to the use of the Index or the IP, as applicable, even if notified of the possibility of such damages. No IP Provider published or approved this document, nor does any IP Provider Accepts any responsibility for its contents or use.
