A Powerful Solution for Your Retirement Accumulation Needs

Power Select Builder 8℠ Annuity

A hypothetical fixed-index annuity illustration prepared for:

Valued Client

Prepared by:

Valued Agent
California
719-442-6400
719-442-6401

Solicitation State: Texas

Date prepared: 4/2/2024

This illustration is hypothetical and is intended solely to depict how different crediting strategies and rates can affect the annuity's contract value and contractual benefits including any optional features selected. This illustration is only valid in solicitation state. Interest rates, index factors, fees and other assumed values are not guaranteed and can be changed by the company prior to the date your contract is issued. Actual results may therefore be higher or lower than shown. Your Minimum Declared Interest Rate (applicable only to the Fixed Interest Account) and other guarantees will be stated in your contract. Please be sure to read the additional disclosure at the end of the illustration. This material is intended only for educational purposes to help you, with the guidance of your financial advisor, make informed decisions. We are not a fiduciary and do not provide investment advice or recommendations.

THIS IS AN ILLUSTRATION ONLY. AN ILLUSTRATION IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE. INTEREST RATES, DIVIDENDS, OR VALUES THAT ARE SET FORTH IN THE ILLUSTRATION ARE NOT GUARANTEED, EXCEPT FOR THOSE ITEMS CLEARLY LABELED AS GUARANTEED.

The purchase of a fixed index annuity is not required for, and is not a term of, the provision of any banking service or activity.

Not FDIC or NCUA/NCUSIF Insured

May Lose Value • No Bank or Credit Union Guarantee
Not a Deposit • Not Insured by any Federal Government Agency

THIS ILLUSTRATION IS NOT COMPLETE UNLESS ALL PAGES ARE INCLUDED.

Issued By **American General Life Insurance Company**

By purchasing the Power Select Builder 8, you can benefit from:

- **GROWTH** potential through index crediting strategies

  Access a range of strategies designed to help accumulate more assets for retirement income.

- **INCOME** that's guaranteed for life

  Take advantage of lifetime income options through annuitization, a process that converts your contract into lifetime income payments at no additional cost.

- **PROTECTION** against current taxes

  Through the power of tax deferral, you pay no current income tax on any gains until they're withdrawn.

This hypothetical illustration is provided to give you a feel for the interest crediting that would result from each of the interest crediting strategies based on the history or back-tested history of the related indexes. Allocating money to these options does not represent an investment directly into the index. Power Select Builder 8 offers interest accounts, each with a different interest crediting strategy, see Understanding Your Interest Crediting Strategies. These accounts are subject to change until the contract is issued and once issued, they may be discontinued or changed with prior notice.

• Fees and Charges. A withdrawal charge may be assessed if you take money from the contract during the first eight contract years. Power Select Builder 8 withdrawal charges decline over eight years (8-8-7-6-5-4-3-2%). The withdrawal charge is not assessed against any applicable 5% free withdrawal amount. A market value adjustment ("MVA") applies to amounts subject to withdrawal charges. The MVA may be positive or negative. Generally, if interest rates have risen, the MVA will decrease the amount you receive due to a withdrawal. If interest rates fall, the MVA will increase the amount you receive. The illustrated scenarios within this report do not present the potential positive or negative impact of an MVA. Withdrawal charges and MVA may be waived under a Terminal Illness Rider or Extended Care Rider, if applicable.

If the following illustration has any allocation to the Fixed Interest Account, it will present values using the Minimum Declared Interest Rate (MDIR). The illustrated MDIR may not be the MDIR you actually receive since it is subject to change at any time up until the contract is issued. Once your contract is issued, however, the MDIR applicable to the Fixed Interest Account, if available, will never change. Additionally, the MDIR is guaranteed never to be less than 1.00 %. MDIR is stated on the Contract Data Page and once the contract is issued, is in effect for the life of the contract.

It is likely that the index will not repeat historical performance, the current declared factors and rates will change and actual values therefore will be higher or lower than those in this illustration. However, they will never be less than the minimum guarantees set forth in your contract.

Power Select Builder 8 interest accounts, each with a different interest crediting strategy, see Understanding Your Interest Crediting Strategies. These accounts are subject to change until the contract is issued and once issued, they may be discontinued or changed with prior notice.

Annuities are designed for long-term retirement savings and offer tax deferral. Withdrawals of taxable amounts are subject to ordinary income tax and, if taken prior to age 59½, a 10% federal tax penalty may apply. Partial withdrawals may reduce benefits available under the contract as well as the amount available upon a full surrender. Early withdrawals may also be subject to withdrawal charges and MVA. Keep in mind, if your premium is tax-qualified (such as an IRA), an annuity provides no additional tax-deferred benefit beyond that provided by the plan. You should only use a fixed-index annuity in a tax-qualified plan if you want to benefit from features other than tax deferral. Please consult with your financial and tax advisor regarding your individual situation. If you elect the income benefit, the fee reduces the contract value on an annual basis. This means that in prolonged down markets you could lose premium. **Guarantees are backed by the claims paying ability of the issuing insurance company.**

Please read the Owner Acknowledgement and Buyer's Guide that will be presented to you when you purchase your annuity for more detailed information not included in this hypothetical illustration.

What you should know about the indices underlying our Index Crediting Strategies

The **S&P 500® Index*** includes 500 of the leading companies in the U.S. stock market. It is widely regarded as the standard for measuring U.S. stock market performance. When allocating money to an interest crediting option that uses this index in the calculation of interest, a key consideration for the performance of the S&P 500® index (excluding dividends) is the change in the value of the Index from the beginning of the index term to its end.

The **ML Strategic Balanced Index™** (MLSB) blends equity and fixed income indices using a non-discretionary, rules-based process to adjust exposures to the S&P 500® Index and the Merrill Lynch 10-Year U.S. Treasury Futures Total Return Index. This process may help the Index generate positive returns while meeting a target volatility level. Pursuant to the rules of the index, the index weightings are rebalanced every six months based on the historical volatility of the Index. As an additional measure of risk control, the index methodology may cause increases or decreases in cash positions daily to help maintain the overall volatility of the Index at or near its targeted 6%. Volatility control measures seek to provide smoother results and mitigate sharp market fluctuations. While this type of strategy can lessen the impact of market downturns, it is important to note that it may also lessen the impact of market upturns, therefore limiting upside potential. When allocating money to an interest crediting option that uses this index in the calculation of interest, some key considerations for the performance of the underlying index include the change in the S&P 500 Index (excluding dividends) over the index term, the change in the Merrill Lynch 10-Year U.S. Treasury Futures Total Return Index over the index term, the weightings assigned to the indices (e.g. target volatility mechanism), the absolute level of interest rates, any directional move in interest rate levels, interest rate volatility, and stock market volatility.

The **PIMCO Global Optima Index™** (PIMCO) is designed to combine diversified market exposure with enhanced return potential. It allocates to a broad range of global equity and U.S. fixed income markets while targeting a moderate, consistent risk profile. The equity portion optimizes across U.S. large cap, U.S. mid cap, U.S. small cap, international and emerging markets. Specifically, it seeks to enhance returns by dynamically adjusting its allocation across these markets, favoring those markets that exhibit positive momentum and that are likely to offer value. The fixed income portion invests in high-grade U.S. bonds, including Treasuries, corporate bonds, and mortgage-backed securities. In order to manage risk, the index adjusts the mix of equity and fixed income on a daily basis in order to meet a target volatility level of 7.5% annualized.

The **AB All Market Index℠** provides systematic, rules-based access to the performance of several global equity and fixed income markets. The index seeks to equally distribute risk to equities and fixed income, and to several sub regions and sectors therein. The index will utilize a proprietary momentum signal to drive its asset allocation. To help manage overall return volatility, the index will systematically utilize a volatility targeting mechanism.

The **Dimensional US Foundations Index** is a rules-based multi-asset index that aims to provide higher expected returns in each asset class by leveraging Dimensional' s 40+ years of experience in financial science research and application. The Index allocates exposure on a daily basis among Equities, Fixed Income, and Commodities with a 5% volatility target using a combination of forward-looking implied volatility measures informed by joint research of Dimensional with Nobel Prize Laureate Robert C. Merton and truVol® from Salt Financial, which uses historical intraday data.

*The returns for these indices do not include dividends. This means that dividends paid on the securities underlying these indices are not included in the index return for each index, and index interest therefore will not reflect the higher returns that would apply if dividends were included.

Important Information Regarding Back-Tested Performance of the ML Strategic Balanced Index (MLSB) and PIMCO Global Optima Index: Past performance of these indices, including but not limited to hypothetical performance, is not an indication of future results. Back-tested performance is not actual historical performance, but is hypothetical. The back-test calculations are based on the same methodology that is used in the calculation of the index today. Prospective application of the methodology used to construct these indices may not result in performance that corresponds to the back-tested returns shown. The back-test period does not correspond to the entire available history of the index.
Another limitation of back-tested hypothetical information is that, generally, the back-tested calculation is prepared with the benefit of hindsight. Back-tested data reflects the application of the index methodology and selection of index constituents in hindsight. No hypothetical record can completely account for the impact of financial risk attached to real-world events. For example, there are numerous factors related to the equities, fixed income, in general which cannot be, and have not been, accounted for in the preparation of the index information set forth, all of which can affect actual performance.

The following illustrations reflect the pre-inception performance data of the ML Strategic Balanced Index (MLSB) and PIMCO Global Optima Index based on hypothetical back-tested closing values. Back-testing periods illustrated vary as described. Post-inception, actual live index historical performance data of the MLSB Index will be based on closing values beginning 8/31/2014. The PIMCO became available on 10/13/2017 and the illustration will be based on back-tested data prior to the inception date. The AB All Market Index℠ became available on 12/12/2019 and the illustration will be based on back-tested data prior to the inception date. The Dimensional US Foundations Index (DFA US) became available on 09/30/2022 and the illustration will be based on back-tested data prior to the inception date.

Please note: Some states do not permit the use of back tested performance in illustrations, even though the Interest Crediting options are available within the annuity product.

This illustration includes the following hypothetical performance scenarios

Guaranteed Values (Minimum Rates)

- **0% Credited Interest and Fixed Interest Account Minimum Declared Interest Rate (MDIR) (Page 7 & 8):** This scenario reflects minimum contract values for the specified time period. It assumes that any money allocated to an Interest Crediting Strategy credits zero percent interest and any money allocated to the Fixed Interest Account earns the currently applicable MDIR, held constant for the time period.

Non-Guaranteed Values (Current Rates) - The benefits and values are not guaranteed

- **Specific Period (Page 9 & 10):** For this scenario, any money allocated to the S&P 500-based Interest crediting strategies is illustrated using the historical performance of the last 30 years of the S&P 500 index and the most recent 15 years of back-tested performance repeated twice for the MLSB, AB, DFA US, and PIMCO indices. In some states we are not permitted to illustrate the MLSB, AB, DFA US, and PIMCO indices because they contain less than 10 years of actual history. Any money allocated to the Fixed Interest Account assumes the current Fixed Interest Account rate (Current Rate) held constant for the period shown.

  Note for scenarios that illustrate beyond 30 years, the illustration will repeat the most recent 10 year period until reaching the Latest Annuity Date "LAD" of age 95.

- **Non Guaranteed – Assumed Rate (Page 11 & 12):** This scenario reflects a hypothetical constant assumed rate selected for the illustrated period. This rate is not likely to occur, and actual rates and results may be more or less favorable than those shown. This scenario does not reflect any index strategy, term, spread, cap rate or participation rate.

- **Interest Crediting and Accumulation Value Details for Each Allocated Interest Crediting Strategy (Page 13):** This scenario illustrates the values associated with each individual interest crediting strategy from the specific period scenario on the previous page.

- **Optional Non-Guaranteed - Favorable and Unfavorable Periods (Page 15 & 16):** This scenario uses performance from the 10 best consecutive years out of the last 20 years to create a "Most Favorable" illustration scenario, and the performance from the 10 worst consecutive years out of the last 20 years to create a "Least Favorable" illustration scenario. This scenario assumes that the premiums allocated to an Interest Crediting Strategy or the Fixed Interest Account is illustrated using the current caps, spreads and Fixed Interest Account rates. These scenarios reflect hypothetical contract values for the specified time period, based on historical index performance, current declared index factors, and the current initial Fixed Interest Account interest rate and other current values held constant for the time period.

PAST PERFORMANCE IS BASED ON HYPOTHETICAL HISTORICAL DATA AND IS NO GUARANTEE OF FUTURE RESULTS. ACTUAL INTEREST CREDITING RESULTS WILL VARY BASED ON MARKET CONDITIONS, INDEX ALLOCATIONS, AND INTEREST PAR RATES, CAPS AND SPREADS, AS APPLICABLE. THE VALUES IN THIS ILLUSTRATION ARE NOT GUARANTEES OF OR EVEN ESTIMATES OF THE AMOUNTS YOU CAN EXPECT FROM YOUR ANNUITY.

IMPORTANT NOTICE

Basic Facts about Index Annuities

- Index annuities are long-term contracts
- You do not invest directly in the securities and other investments comprising the index
- Index interest is not guaranteed
- Factors determining degree of participation in index performance (e.g., caps) may limit interest earned, can be reset each index term, and can be lower in future periods
- Contracts with living benefits have rider fees that reduce contract value as long as rider is in effect; deduction of these fees reduces amount of interest you derive from the index option
- Constituent investments in a "dynamic" index can change over time based on the guiding index strategy, and there is no guarantee that such changes will produce positive performance or will mirror changes in essentially static indices like the S&P 500

An important word about the assumptions underlying the illustrated values and how illustrations are merely hypothetical

First, it is important to note that hypothetical illustrations are intended to help you understand how this annuity product works in broad terms. In general, actual and/or back-tested performance of the index crediting strategies is utilized, and these figures are combined with current crediting rates in order to demonstrate a potential performance path. [1] Many different factors will cause your actual performance to differ from the illustrated outcomes, such as Index performance, initial participation and crediting rates, renewal rates and any withdrawals taken. It is important to note that **this illustration is not a promise of future returns or results.**

Further, we want to highlight some important factors that impact this illustration and should be understood:

- Historical Performance: Generally, market performance during the 2010's was particularly strong, and this illustration utilizes much of the performance from that time period. While that type of performance could continue, past performance is not indicative of future results, and different volatility and/or interest rate environments can result in different performance results of any index in the future.
- Rising Interest Rates: As interest rates increase, participation rates and other crediting rates we offer generally can be higher than when interest rates are significantly lower. Higher crediting rates provide you with a greater opportunity for higher interest credits in the future, but still could result in zero interest credits if the underlying index performance is not positive.
- Decreasing Interest Rates: As interest rates decrease, participation rates and other crediting rates we offer generally decline. Lower crediting rates provide you with less opportunity than during higher interest rate periods, but still could result in zero interest credits if the underlying index performance is not positive.

Also be aware that current crediting rates are held constant for the entire period reflected in the illustration. Please keep in mind that your actual crediting rates can change (lower or higher) as frequently as annually and will impact the actual outcome.

Therefore, as you work with your financial professional to determine what is best for you, please be mindful of this information and do not overly rely upon the illustrated outcomes when setting your expectations for future results. Your actual results will be determined based on the future performance of the index you choose AND the initial and renewal crediting rates set on the annuity, among other factors.

[1] Back-tested performance applies the index methodology to historical performance in instances where the index crediting strategy has not been in existence for as long as the illustrated period.

I-HYIN (10/22)

A look at the "range of potential outcomes"

To help you understand how varying index performance could impact the outcome of illustrated values shown (including any withdrawals, if applicable), we present a range of outcomes using the following three specified scenarios (as defined on p. 4):

- **Minimum Rates (Page 7):** *Assumes a "0% Credited Interest and Fixed Interes Account Minimum Declared Interest Rate (MDIR)".*
- **Current Rates (Page 9):** *Assumes a "Specific period" for the illustrated index or indices using current crediting rates held constant. The hypothetical returns assume that the currently applicable rates applied to index performance (e.g., participation rate; cap rate) remain unchanged during the entire illustrated period. In actual practice, those rates can change annually.*
- **Assumed Rate (Page 11):** *"3.00% Assumed Index Interest Rate"*

These range of outcomes are highlighted in the chart to the right. The chart shows the hypothetical Account Values for all 3 scenarios.

For the hypothetical specific period index performance shown on page 9, we use back-tested index Performance and, when available, historical performance. Back-tested performance (explained in more detail on page 3) is a way of generating hypothetical performance for a period when an index was not yet available. It gives you an indication of how the annuity would have performed by applying the index methodology to historical data. For back-tested performance we use the most recent 15 years repeated to show 30 years.

The goal in providing this information is to give you a more complete overview of how the annuity could perform over time. Since the outcome is based in part on the performance of an index, there is no guarantee as to Contract Value, and the actual value of your contract you'll receive will differ.

Enhanced Participation Rate Strategies - The Credited Interest Rate and Interest Earned shown at the end of the withdrawal charge period include any Enhanced Par Strategy Fee Credit, if applicable.

Understanding Your Interest Crediting Strategy(ies)

Power Select Builder 8 credits interest using up to nineteen (19) interest crediting strategies – eighteen (18) index interest accounts and a fixed interest account. These strategies are described below. The factors used in calculating index interest are subject to change at any time up until the contract is issued, as are both the current Initial Interest Rate and the Minimum Declared Interest Rate on the fixed interest account. The Initial Interest Rate, Index Rate, Cap(s), Spread, and Participation Rates as applicable, can be found on the Contract Data Page and/or Rider Data Page(s) of the contract, as applicable, along with the minimum and maximum guaranteed rates and values. Thereafter, interest rates and index account factors will be declared annually in advance of each contract anniversary and will be guaranteed for the following contract year.

Index interest accounts are not a permanent part of the contract and may be removed due to circumstances beyond AGL's control. Such circumstances include, but are not limited to, the discontinuation of an index, a change in the composition or calculation of an index, the inability to license the use of an index and the inability to hedge risks associated with these index interest accounts. Special rules govern how assets in a discontinued index interest account may be reallocated. These rules may differ by state. Please see the Owner Acknowledgment and Disclosure Statement for more information.

All rates and values are subject to change until the date of issue.

Understanding Your Interest Crediting Strategy(ies), continued

- **AB All Market 2-Year Point-to-Point Participation Rate:** This strategy credits index interest, if any, based on the percent change in the AB All Market Index over the Index Term (two years). The index percent change is subject to the declared Participation Rate for the entire Index Term, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **AB All Market Annual Point-to-Point Participation Rate (AB All Market Index):** This strategy credits index interest, if any, based on the percent change in the AB All Market Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **S&P Annual Point-to-Point with Cap:** This option credits calculated index interest every Contract Anniversary and is based on the percent change in the S&P500® Index over the one year period ending on that day. The annual index percent change, subject to declared Participation Rate, and Index Rate Cap, is the calculated rate of index interest for that Index Term. Interest for each Index Term is not earned until the end of that Index Term (on the Contract Anniversary). The rate of interest will never be less than zero.
- **S&P Annual Point-to-Point Participation Rate:** This option credits calculated index interest every Contract Anniversary and is based on the percent change in the S&P500® Index over the one year period ending on that day. The annual index percent change is subject to an annually declared Participation Rate and spread, and is the calculated rate of index interest for that Index Term. Interest for each Index Term is not earned until the end of that Index Term (on the Contract Anniversary). The rate of interest will never be less than zero.
- **MLSB 2-Year Point-to-Point Participation Rate (ML Strategic Balanced Index):** This strategy credits index interest, if any, based on the percent change in the MLSB Index over the Index Term (two years). The index percent change is subject to the declared Participation Rate for the entire Index Term, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **PIMCO Annual Point-to-Point Participation Rate (PIMCO Global Optima Index):** This strategy credits index interest, if any, based on the percent change in the PIMCO Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **PIMCO 2-Year Point-to-Point Participation Rate (PIMCO Global Optima Index):** This strategy credits index interest, if any, based on the percent change in the PIMCO Index over the Index Term (two years). The index percent change is subject to the declared Participation Rate, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **AB All Market Annual Point-to-Point with EPRS(Tier 1):** This strategy credits index interest, if any, based on the percent change in the AB All Market Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero. Please note there is an explicit charge associated with this crediting strategy that will be deducted from your Contract Value allocated to this strategy at the end of the index term.
- **AB All Market 2-Year Point-to-Point with EPRS (Tier 1):** This strategy credits index interest, if any, based on the percent change in the AB All Market over the Index Term (two years). The index percent change is Subject to the declared Participation Rate for the entire Index Term and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero. Please note there is an explicit charge associated with this crediting strategy that will be deducted from your Contract Value allocated to this strategy at the end of the index term.
- **AB All Market Annual Point-to-Point with EPRS (Tier 2):** This strategy credits index interest, if any, based on the percent change in the AB All Market Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero. Please note there is an explicit charge associated with this crediting strategy that will be deducted from your Contract Value allocated to this strategy at the end of the index term. The annualized fee and the Participation Rate for this strategy will be higher than for the Tier 1 version of this index strategy.
- **AB All Market 2-Year Point-to-Point with EPRS (Tier 2):** This strategy credits index interest, if any, based on the percent change in the AB All Market over the Index Term (two years). The index percent change is Subject to the declared Participation Rate for the entire Index Term and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero. Please note there is an explicit charge associated with this crediting strategy that will be deducted from your Contract Value allocated to this strategy at the end of the index term. The annualized fee and the Participation Rate for this strategy will be higher than for the Tier 1 version of this index strategy.
- **Dimensional US Foundations (DFA US Foundations) Annual Point-to-Point EPR (Tier 1):**): This strategy credits index interest, if any, based on the percent change in the Dimensional US Foundations (DFA US Foundations) over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero. Please note there is an explicit charge associated with this crediting strategy that will be deducted from your Contract Value allocated to this strategy at the end of the index term.
- **Dimensional US Foundations (DFA US Foundations) 2-Year Point-to-Point with EPRS (Tier 1):** This strategy credits index interest, if any, based on the percent change in the Dimensional US Foundations (DFA US Foundations) over the Index Term (two years). The index percent change is subject to the declared Participation Rate for the entire Index Term and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero. Please note there is an explicit charge associated with this crediting strategy that will be deducted from your Contract Value allocated to this strategy at the end of the index term.
- **Dimensional US Foundations (DFA US Foundations) Annual Point-to-Point with EPRS (Tier 2):** This strategy credits index interest, if any, based on the percent change in the Dimensional US Foundations (DFA US Foundations) Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero. Please note there is an explicit charge associated with this crediting strategy that will be deducted from your Contract Value allocated to this strategy at the end of the index term. The annualized fee and the Participation Rate for this strategy will be higher than for the Tier 1 version of this index strategy.
- **Dimensional US Foundations (DFA US Foundations) 2-Year Point-to-Point with EPRS (Tier 2):** This strategy credits index interest, if any, based on the percent change in the Dimensional US Foundations (DFA US Foundations) over the Index Term (two years). The index percent change is subject to the declared Participation Rate for the entire Index Term and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero. Please note there is an explicit charge associated with this crediting strategy that will be deducted from your Contract Value allocated to this strategy at the end of the index term. The annualized fee and the Participation Rate for this strategy will be higher than for the Tier 1 version of this index strategy.
- **Dimensional US Foundations (DFA US Foundations) Annual Point-to-Point Participation Rate:** This strategy credits index interest, if any, based on the percent change in the Dimensional US Foundations (DFA US Foundations) Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.

Understanding Your Interest Crediting Strategy(ies), continued

- **Dimensional US Foundations (DFA US Foundations) 2-Year Point-to-Point Participation Rate:** This strategy credits index interest, if any, based on the percent change in the Dimensional US Foundations (DFA US Foundations) Index over the Index Term (two years). The index percent change is subject to the declared Participation Rate for the entire Index Term, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **S&P Annual PTP Performance-Triggered:** This option credits interest every Contract Anniversary that is based on the percent change in the S&P500® Index over the one year period ending on that Contract Anniversary. The rate of interest credited will equal the Triggered Rate if the change in index value over the index term is equal to or greater than the minimum change in index value. Interest for each Index Term is not earned until the end of that Index Term. The rate of interest earned will never be less than zero.
- **Fixed Interest Account:** This option is a fixed-rate account with a 1-year term. Interest is credited daily on a compound basis to achieve the annual declared rate. The Fixed Interest Account initial interest rate is guaranteed for the first Contract Year. A new interest rate will be declared annually in advance of each contract anniversary and will be guaranteed for the following Contract Year.

Key Terms and Definitions

For the Interest Crediting Strategies

- **Index Term:** An Index Term is a period used to measure the change in the Index Prices for each Index Interest Account. At the end of the Index Term (i.e. on the contract anniversary), we may credit Index Interest. The initial Index Term for the Interest Index Accounts begins on the Contract Date. Subsequent Index Terms begin on the end date of the previous Index Term. The end date for an Index Term is on a Contract Anniversary.
- **S&P 500 Index:** It is an index of the stock of 500 publicly traded companies, without dividends. The S&P 500 Value on the Rider Effective Date is shown on the Rider Data Page. “S&P 500” means the value of the S&P 500 that is published by S&P at the close of each day that the S&P 500 is calculated
- **ML Strategic Balanced Index®:** It is an index comprised of a dynamic combination of the S&P 500 Index, without dividends, and the Merrill 10 Year Treasury Futures Index (total return), with a 6% volatility target. The ML Strategic Balanced Index Value on the Rider Effective Date is shown on the Rider Data Page. “ML Strategic Balanced Index” means the value of the ML Strategic Balanced Index that is published by BofAMerrill Lynch at the close of each day that the ML Strategic Balanced Index is calculated. This index embeds an annual index cost in the calculations of the change in Index Value over the Index Term. This “embedded index cost” will reduce the change in Index Value that would otherwise have applied, and funds certain operational and licensing costs for the index. It is not a fee paid by you or received by the Company.
- The PIMCO Global Optima Index is a comprehensive equity and bond index, offering exposure to global equity and U.S. fixed income markets.
- **Enhanced Participation Rate Strategies (EPRS):** These strategies offers greater upside interest crediting potential in exchange for an annualized fee. The Enhanced Participation Rate and the fee differ for Tier 1 and Tier 2 EPRS accounts.
- **EPRS fee:** An annualized fee is deducted from Enhanced Participation Rate Strategies at the end of the index term. The fee and the participation rate for Tier 2 options is higher than for Tier 1 options. You may, but are not guaranteed to, receive higher interest credits in an EPRS option than a non-EPRS option.
- **EPRS fee credit or “true up”:** If you pay more in EPRS fees than the total interest credited to your contract at the end of the withdrawal charge period, we will automatically apply a one-time interest credit “true up” to increase the value of interest earned versus the total EPRS fees paid. If you surrender the contract before the end of the withdrawal charge period, you will not benefit from this potential interest credit.

Column Heading Definitions

- **Index Annual Change:** represents the positive or negative change associated with the index for a given year. This change is the basis for the Interest Earned and Credited Interest rate associated with the interest crediting options illustrated.
- **Interest Earned and Credited Interest Rate:** In this report, Interest Earned on Index Accounts is the dollar amount of index interest earned and payable each year on amounts remaining in the Index Interest Account on the Contract Anniversary. It is based on the change in the index and factors used to calculate the Credited Interest Rate. Amounts in each index account on the contract anniversary are multiplied by the applicable Credited Interest Rate for that account. For the Fixed Interest Account MDIR, as well as Initial and subsequent annual declared rates, are credited and compounded daily to achieve the appropriate declared rate.

  For the Assumed Rate depiction, annual Credited Interest Rate is the Assumed Rate and Interest Earned does not reflect any index strategy, term, spread, cap rate or participation rate.
- **Participation Rate:** The Initial Participation Rate is set at contract issue and is guaranteed for one year or two years (depending on strategy selection). After the first (or second) Contract Year, subsequent Participation Rates are declared annually at the end of each Index Term (on the Contract Anniversary) and are guaranteed for the following contract year.
- **Index Rate Cap:** The Initial Index Rate Cap is set at contract issue and is guaranteed for one year. After the first Contract Year, subsequent Index Rate Caps are declared annually at the end of each Index Term (on the contract anniversary) and are guaranteed for the following year. Generally, each Interest Crediting Strategy has a corresponding Rate Cap.
- **Minimum Index Rate Cap:** A declared Index Rate Cap cannot be set lower than the applicable Minimum Index Rate Cap stated on the Rider Data Page.
- **Minimum Participation Rate:** A declared Participation Rate cannot be set lower than the Minimum Participation Rate stated on the Rider Data Page.
- **Enhanced Participation Rate Strategies (EPRS):** These crediting strategies offer Participation Rates higher than the Participation Rate applicable to crediting strategies with no annualized fee. The Enhanced Participation Rate Strategies (EPRS) offer the potential for greater upside but there is no guarantee you will receive higher interest credits in these strategies. However, if you select one or more of these strategies, there is a one-time fee credit or "true up" may apply: at the end of the withdrawal charge period, when we will automatically increase your Contract Value by the excess of any fees paid over interest earned under the contract in the strategy.

  Enhanced Participation Rate Strategy Fee - There is a separate annualized fee for the Enhanced Participation Rate strategies.

Key Terms and Definitions Continued

- **Contract Anniversary Value:** The contract value on the contract anniversary. This value reflects reduction of any applicable annual Rider Fees.

- **Death Benefit:** The amount payable upon death, which is the Contract Value or the Minimum Withdrawal Value, if greater.

- **Premium Enhancement:** Premium enhancement(s) are amounts added to the contract on initial and subsequent Premiums as a percentage of each Premium as shown below. Premium enhancements are added to the contract by the company in the same proportion as each corresponding Premium. Premium enhancements are added as interest and are not considered Eligible Premiums but for purposes of determining the Living Benefit Income Base and Income Credit Base, they are added to the Income Base and Income Credit Base. Certain look-back rules apply to cumulate multiple premiums and potentially qualify you for a higher Premium Enhancement Rate. Note: This illustration assumes a single Initial Premium and applicable Premium Enhancement are applied to the contract on the date of issue (or contract date).

Premium Level	Premium Enhancement
Under $100,000	10%
$100,000 or more	10%

The contract also provides for the recapture of Premium Enhancements by certain partial withdrawals (pro-rata) and upon death, annuitization during the withdrawal period or a full surrender of the contract (recapture according to a 8-year declining schedule (80, 70, 60, 50, 40, 30, 20, 10 and 0%). Read your contract for more details.

- **Cash Surrender Value:** In this illustration, it represents what you would receive if you withdrew all your money at one time. This illustrated value is the greater of the Cash Surrender Value and the Minimum Withdrawal Value. The Cash Surrender Value is the contract value adjusted for all applicable withdrawal charges. Power Select Builder 8 withdrawal charges decline over a period of eight years and the Minimum Withdrawal Value is equal to a percentage of your premium(s), less prior withdrawals (excluding any withdrawal charges and MVA), and currently set at 87.5 %, accumulated at the Interest Rate for Minimum Withdrawal Values and currently set at 3.00 %.
- **Maturity Date:** The latest age, specified in your contract, by which you will need to select one of the following options if the Contract Value is greater than zero: 1) begin annuity income payments (see Annuity Options below) or 2) surrender the contract. If you do not select an option, we will automatically begin annuity income payments as set forth in the contract.
- **Annuity Options:** If you elect to annuitize the contract, available Annuity Options include payments for life only or life with period certain, either of which may be for single life or joint lives; a fixed period certain only; or any payment option that is mutually agreeable between you and the company.
- **Tax-qualified Plans:** This modified single premium product may not be appropriate for use with contributory IRAs (IRA, Roth and SEP) if you plan to make ongoing contributions. Also keep in mind, purchasing an annuity within a tax-qualified plan provides no additional tax-deferred benefit beyond that provided by the plan.
- **Additional Note on Cancellation:** If you find that the optional feature is no longer right for you, you may cancel the feature on the 5th contract anniversary or any contract anniversary thereafter. Once cancelled, the feature cannot be re-elected. Keep in mind that the feature may be automatically terminated under certain circumstances, such as when the contract is annuitized or surrendered. Other circumstances may also apply.

The Product has been developed solely by American General Life Insurance Company. The Index is calculated by FTSE or its agent. FTSE and its licensors are not connected to and do not sponsor, advise, recommend, endorse or promote the Product and do not accept any liability whatsoever to any person arising out of (a) the use of, reliance on or any error in the Index or (b) purchase of or operation of the Product. FTSE makes no claim, prediction, warranty or representation either as to the results to be obtained from the Product or the suitability of the Index for the purpose to which it is being put by American General Life Insurance Company.

The Products referred to herein are not sponsored, endorsed or promoted by MSCI Inc., and MSCI Inc. bears no liability with respect to any such Products or any index on which such Products are based. The contract contains a more detailed description of the limited relationship MSCI has with American General Life Insurance Company and any related Products.

SPDR® S&P 500® ETF Trust (SPY ETF), SPDR® S&P® MidCap 400 ETF Trust (MDY ETF), and iShares Core U.S. Aggregate Bond ETF (AGG ETF) are constituents of the PIMCO Global Optima Index™. S&P® and SPDR® are registered trademarks of Standard & Poor's Financial Services LLC (S&P); iShares™ is a registered trademark of BlackRock Fund Advisors or BlackRock, Inc. and its subsidiaries, collectively, the "ETF Trademark Owners." The PIMCO Global Optima Index™ is not sponsored, endorsed, sold, or promoted by the ETF Trademark Owners. The ETF Trademark Owners make no representations or warranties to the owners of products utilizing the PIMCO Global Optima Index or any member of the public regarding the advisability of purchasing a product utilizing the PIMCO Global Optima Index. The ETF Trademark Owners have no obligation or liability in connection with the operation, marketing, trading or sale of the PIMCO Global Optima Index.

The index annuity product to which this disclosure applies (the "Product") has been developed solely by American General Life Insurance Company ("AGL"). The "Product" is not in any way connected to or sponsored, endorsed, sold or promoted by the London Stock Exchange Group plc and its group undertakings (collectively, the "LSE Group"). FTSE Russell is a trading name of certain of the LSE Group companies.

The product referred to herein is not sponsored, endorsed, or promoted by MSCI, and MSCI bears no liability with respect to any such product or any index on which such product is based. The contract contains a more detailed description of the limited relationship MSCI has with Licensee and any related product.

The AB All Market Index℠ is a service mark owned by Alliance Bernstein L.P. ("AB"), and has been licensed to American General Life Insurance Company ("Licensee"). The index annuity product to which this disclosure applies (the "Product") has been developed solely by Licensee. The Product is not sponsored, endorsed, or promoted by AB, and AB bears no liability with respect to the Product or any index on which such Product is based. AB does not provide investment advice to the Product or Licensee, and in no event shall any contract owner of the Product be deemed to be a client of AB. The prospectus, contract, policy or other similar governing document contains a more detailed description of the limited relationship AB has with Licensee and any related product.

The Dimensional US Foundations Index (the "Index") is sponsored and published by Dimensional Fund Advisors LP ("Dimensional"), which has contracted with Salt Financial LLC ("Salt") (each of Dimensional and Salt, an "IP Provider", and which shall include each of their respective directors, officers, employees, representatives, delegates or agents) to provide intellectual property (the "IP") that is used by Dimensional in connection with the maintenance and calculation of the Index. The use of "Dimensional" in the name of the Index and the related stylized mark(s) are service marks of Dimensional and have been licensed for use by American General Life Insurance Company ("AGL"). AGL has entered into a license agreement with Dimensional providing for the right to use the Index and related trademarks in connection with the Index Annuity (the "Financial Product"). The Financial Product is not sponsored, Endorsed, sold or promoted by any IP Provider, and no IP Provider makes any representation regarding the advisability of investing in such Financial Product. No IP Provider gives any express or implied Warranties, including, but not limited to, any warranties of Merchantability or fitness for a particular purpose or use. No IP Provider guarantees the accuracy, timeliness or completeness of the Index or the IP, as applicable, or any data included therein or the calculation thereof Or any communications with respect thereto, as the case may be, and each has no liability for any errors, omissions or interruptions therein. In no event shall any IP Provider have any liability of whatever nature for any losses, damages, costs, claims and expenses (including any special, punitive, direct, indirect or consequential damages (including lost profits)) arising out of matters relating to the use of the Index or the IP, as applicable, even if notified of the possibility of such damages. No IP Provider published or approved this document, nor does any IP Provider Accepts any responsibility for its contents or use.
