A Powerful Solution for Your Retirement Accumulation Needs

Power Index 5 Elite℠ Annuity

A hypothetical fixed-index annuity illustration prepared for:

Valued Client

Prepared by:

Valued Agent
California
719-442-6400
719-442-6401

Solicitation State: Idaho

Date prepared: 4/3/2024

This illustration is hypothetical and is intended solely to depict how different crediting strategies and rates can affect the annuity's contract value and contractual benefits including any optional features selected. This illustration is only valid in solicitation state. Interest rates, index factors, fees and other assumed values are not guaranteed and can be changed by the company prior to the date your contract is issued. Actual results may therefore be higher or lower than shown. Your Minimum Declared Interest Rate (applicable only to the Fixed Interest Account) and other guarantees will be stated in your contract. Please be sure to read the additional disclosure at the end of the illustration. This material is intended only for educational purposes to help you, with the guidance of your financial advisor, make informed decisions. We are not a fiduciary and do not provide investment advice or recommendations.

THIS IS AN ILLUSTRATION ONLY. AN ILLUSTRATION IS NOT INTENDED TO PREDICT ACTUAL PERFORMANCE. INTEREST RATES, DIVIDENDS, OR VALUES THAT ARE SET FORTH IN THE ILLUSTRATION ARE NOT GUARANTEED, EXCEPT FOR THOSE ITEMS CLEARLY LABELED AS GUARANTEED.

The purchase of a fixed index annuity is not required for, and is not a term of, the provision of any banking service or activity.

Not FDIC or NCUA/NCUSIF Insured
May Lose Value • No Bank or Credit Union Guarantee Not a Deposit • Not Insured by any Federal Government Agency

THIS ILLUSTRATION IS NOT COMPLETE UNLESS ALL PAGES ARE INCLUDED.

Issued By **The Variable Annuity Life Insurance Company (VALIC)**

By purchasing the Power Index 5 Elite, you can benefit from:

- **GROWTH** potential through index crediting strategies

  Access a range of strategies designed to help accumulate more assets for retirement income.

- **INCOME** that's guaranteed for life

  Take advantage of lifetime income options through annuitization, a process that converts your contract into lifetime income payments at no additional cost.

- **PROTECTION** against current taxes

  Through the power of tax deferral, you pay no current income tax on any gains until they're withdrawn.

This hypothetical illustration is provided to give you a feel for the interest crediting that would result from each of the interest crediting strategies based on the history or back-tested history of the related indexes. Allocating money to these options does not represent an investment directly into the index. Power Index 5 Elite offers interest accounts, each with a different interest crediting strategy, see Understanding Your Interest Crediting Strategies. These accounts are subject to change until the contract is issued and once issued, they may be discontinued or changed with prior notice.

• Fees and Charges. A withdrawal charge may be assessed if you take money from the contract during the first five contract years. Power Index 5 Elite withdrawal charges decline over five years (8-7-6-5-4%). The withdrawal charge is not assessed against any applicable 10% free withdrawal amount. A market value adjustment ("MVA") applies to amounts subject to withdrawal charges. The MVA may be positive or negative. Generally, if interest rates have risen, the MVA will decrease the amount you receive due to a withdrawal. If interest rates fall, the MVA will increase the amount you receive. The illustrated scenarios within this report do not present the potential positive or negative impact of an MVA. Withdrawal charges and MVA may be waived under a Terminal Illness Rider or Extended Care Rider, if applicable.

If the following illustration has any allocation to the Fixed Interest Account, it will present values using the Minimum Declared Interest Rate (MDIR). The illustrated MDIR may not be the MDIR you actually receive since it is subject to change at any time up until the contract is issued. Once your contract is issued, however, the MDIR applicable to the Fixed Interest Account, if available, will never change. Additionally, the MDIR is guaranteed never to be less than 1.00 %. MDIR is stated on the Contract Data Page and once the contract is issued, is in effect for the life of the contract.

It is likely that the index will not repeat historical performance, the current declared factors and rates will change and actual values therefore will be higher or lower than those in this illustration. However, they will never be less than the minimum guarantees set forth in your contract.

Power Index 5 Elite interest accounts, each with a different interest crediting strategy, see Understanding Your Interest Crediting Strategies. These accounts are subject to change until the contract is issued and once issued, they may be discontinued or changed with prior notice.

Annuities are designed for long-term retirement savings and offer tax deferral. Withdrawals of taxable amounts are subject to ordinary income tax and, if taken prior to age 59½, a 10% federal tax penalty may apply. Partial withdrawals may reduce benefits available under the contract as well as the amount available upon a full surrender. Early withdrawals may also be subject to withdrawal charges and MVA. Keep in mind, if your premium is tax-qualified (such as an IRA), an annuity provides no additional tax-deferred benefit beyond that provided by the plan. You should only use a fixed-index annuity in a tax-qualified plan if you want to benefit from features other than tax deferral. Please consult with your financial and tax advisor regarding your individual situation. If you elect the income benefit, the fee reduces the contract value on an annual basis. This means that in prolonged down markets you could lose premium. **Guarantees are backed by the claims paying ability of the issuing insurance company.**

Please read the Owner Acknowledgement and Buyer's Guide that will be presented to you when you purchase your annuity for more detailed information not included in this hypothetical illustration.

What you should know about the indices underlying our Index Crediting Strategies

The **S&P 500® Index*** includes 500 of the leading companies in the U.S. stock market. It is widely regarded as the standard for measuring U.S. stock market performance. When allocating money to an interest crediting option that uses this index in the calculation of interest, a key consideration for the performance of the S&P 500® index (excluding dividends) is the change in the value of the Index from the beginning of the index term to its end.

The **MSCI EAFE Index*** is designed to represent the performance of large- and mid-cap securities across 21 developed markets in Europe, Australasia, Far East, excluding the US & Canada. As of September 2018, it had more than 900 constituents and covered approximately 85% of the free float-adjusted market capitalization in each country.

The **ML Strategic Balanced Index™** (MLSB) blends equity and fixed income indices using a non-discretionary, rules-based process to adjust exposures to the S&P 500® Index and the Merrill Lynch 10-Year U.S. Treasury Futures Total Return Index. This process may help the Index generate positive returns while meeting a target volatility level. Pursuant to the rules of the index, the index weightings are rebalanced every six months based on the historical volatility of the Index. As an additional measure of risk control, the index methodology may cause increases or decreases in cash positions daily to help maintain the overall volatility of the Index at or near its targeted 6%. Volatility control measures seek to provide smoother results and mitigate sharp market fluctuations. While this type of strategy can lessen the impact of market downturns, it is important to note that it may also lessen the impact of market upturns, therefore limiting upside potential. When allocating money to an interest crediting option that uses this index in the calculation of interest, some key considerations for the performance of the underlying index include the change in the S&P 500 Index (excluding dividends) over the index term, the change in the Merrill Lynch 10-Year U.S. Treasury Futures Total Return Index over the index term, the weightings assigned to the indices (e.g. target volatility mechanism), the absolute level of interest rates, any directional move in interest rate levels, interest rate volatility, and stock market volatility.

The **PIMCO Global Optima Index™** (PIMCO) is designed to combine diversified market exposure with enhanced return potential. It allocates to a broad range of global equity and U.S. fixed income markets while targeting a moderate, consistent risk profile. The equity portion optimizes across U.S. large cap, U.S. mid cap, U.S. small cap, international and emerging markets. Specifically, it seeks to enhance returns by dynamically adjusting its allocation across these markets, favoring those markets that exhibit positive momentum and that are likely to offer value. The fixed income portion invests in high-grade U.S. bonds, including Treasuries, corporate bonds, and mortgage-backed securities. In order to manage risk, the index adjusts the mix of equity and fixed income on a daily basis in order to meet a target volatility level of 7.5% annualized.

The **Russell 2000® Index*** is an equity index that measures the performance of the 2,000 smallest companies in the Russell 3000® Index, which is made up of 3,000 of the biggest U.S. stocks. The Russell 2000® Index is constructed to provide a comprehensive and unbiased small-cap barometer and is completely reconstituted annually to ensure larger stocks do not affect the performance and characteristics of the true small-cap index.

The **Franklin Quality Dividend Index** provides exposure to a combination of ETFs and cash or cash-equivalents. The ETFs utilized invest in U.S. large-cap stocks that tend to pay relatively high dividends or have low price volatility.

*The returns for these indices do not include dividends. This means that dividends paid on the securities underlying these indices are not included in the index return for each index, and index interest therefore will not reflect the higher returns that would apply if dividends were included.

Important Information Regarding Back-Tested Performance of the ML Strategic Balanced Index (MLSB) and PIMCO Global Optima Index: Past performance of these indices, including but not limited to hypothetical performance, is not an indication of future results. Back-tested performance is not actual historical performance, but is hypothetical. The back-test calculations are based on the same methodology that is used in the calculation of the index today. Prospective application of the methodology used to construct these indices may not result in performance that corresponds to the back-tested returns shown. The back-test period does not correspond to the entire available history of the index.
Another limitation of back-tested hypothetical information is that, generally, the back-tested calculation is prepared with the benefit of hindsight. Back-tested data reflects the application of the index methodology and selection of index constituents in hindsight. No hypothetical record can completely account for the impact of financial risk attached to real-world events. For example, there are numerous factors related to the equities, fixed income, in general which cannot be, and have not been, accounted for in the preparation of the index information set forth, all of which can affect actual performance.

The following illustrations reflect the pre-inception performance data of the ML Strategic Balanced Index (MLSB) and PIMCO Global Optima Index based on hypothetical back-tested closing values. Back-testing periods illustrated vary as described. Post-inception, actual live index historical performance data of the MLSB Index will be based on closing values beginning 8/31/2014. The PIMCO became available on 10/13/2017 and the illustration will be based on back-tested data prior to the inception date. The Franklin Quality Dividend Index became available on 12/20/2019 and the illustration will be based on back-tested data prior to the inception date.

Please note: Some states do not permit the use of back tested performance in illustrations, even though the Interest Crediting options are available within the annuity product.

This illustration includes the following hypothetical performance scenarios

Guaranteed Values (Minimum Rates)

- **0% Credited Interest and Fixed Interest Account Minimum Declared Interest Rate (MDIR) (Page 7):** This scenario reflects minimum contract values for the specified time period. It assumes that any money allocated to an Interest Crediting Strategy credits zero percent interest and any money allocated to the Fixed Interest Account earns the currently applicable MDIR, held constant for the time period.

Non-Guaranteed Values (Current Rates) - The benefits and values are not guaranteed

- **Specific Period (Page 8):** For this scenario, any money allocated to the S&P 500-based Interest crediting strategies is illustrated using the historical performance of the last 30 years of the S&P 500 index and the most recent 15 years of back-tested performance repeated twice for the Franklin, MLSB, AB, DFA US, and PIMCO indices. In some states we are not permitted to illustrate the Franklin, MLSB, AB, DFA US, and PIMCO indices because they contain less than 10 years of actual history. Any money allocated to the Fixed Interest Account assumes the current Fixed Interest Account rate (Current Rate) held constant for the period shown.

  Note for scenarios that illustrate beyond 30 years, the illustration will repeat the most recent 10 year period until reaching the Latest Annuity Date “LAD” of age 95.

- **Non Guaranteed – Assumed Rate (Page 9):** This scenario reflects a hypothetical constant assumed rate selected for the illustrated period. This rate is not likely to occur, and actual rates and results may be more or less favorable than those shown. This scenario does not reflect any index strategy, term, spread, cap rate or participation rate.

- **Interest Crediting and Accumulation Value Details for Each Allocated Interest Crediting Strategy (Page 10):** This scenario illustrates the values associated with each individual interest crediting strategy from the specific period scenario on the previous page.

- **Optional Non-Guaranteed - Favorable and Unfavorable Periods (Page 12):** This scenario uses performance from the 10 best consecutive years out of the last 20 years to create a “Most Favorable” illustration scenario, and the performance from the 10 worst consecutive years out of the last 20 years to create a “Least Favorable” illustration scenario. This scenario assumes that the premiums allocated to an Interest Crediting Strategy or the Fixed Interest Account is illustrated using the current caps, spreads and Fixed Interest Account rates. These scenarios reflect hypothetical contract values for the specified time period, based on historical index performance, current declared index factors, and the current initial Fixed Interest Account interest rate and other current values held constant for the time period.

PAST PERFORMANCE IS BASED ON HYPOTHETICAL HISTORICAL DATA AND IS NO GUARANTEE OF FUTURE RESULTS. ACTUAL INTEREST CREDITING RESULTS WILL VARY BASED ON MARKET CONDITIONS, INDEX ALLOCATIONS, AND INTEREST PAR RATES, CAPS AND SPREADS, AS APPLICABLE. THE VALUES IN THIS ILLUSTRATION ARE NOT GUARANTEES OF OR EVEN ESTIMATES OF THE AMOUNTS YOU CAN EXPECT FROM YOUR ANNUITY.

IMPORTANT NOTICE

Basic Facts about Index Annuities

- Index annuities are long-term contracts
- You do not invest directly in the securities and other investments comprising the index
- Index interest is not guaranteed
- Factors determining degree of participation in index performance (e.g., caps) may limit interest earned, can be reset each index term, and can be lower in future periods
- Contracts with living benefits have rider fees that reduce contract value as long as rider is in effect; deduction of these fees reduces amount of interest you derive from the index option
- Constituent investments in a "dynamic" index can change over time based on the guiding index strategy, and there is no guarantee that such changes will produce positive performance or will mirror changes in essentially static indices like the S&P 500

An important word about the assumptions underlying the illustrated values and how illustrations are merely hypothetical

First, it is important to note that hypothetical illustrations are intended to help you understand how this annuity product works in broad terms. In general, actual and/or back-tested performance of the index crediting strategies is utilized, and these figures are combined with current crediting rates in order to demonstrate a potential performance path. [1] Many different factors will cause your actual performance to differ from the illustrated outcomes, such as Index performance, initial participation and crediting rates, renewal rates and any withdrawals taken. It is important to note that **this illustration is not a promise of future returns or results.**

Further, we want to highlight some important factors that impact this illustration and should be understood:

- Historical Performance: Generally, market performance during the 2010's was particularly strong, and this illustration utilizes much of the performance from that time period. While that type of performance could continue, past performance is not indicative of future results, and different volatility and/or interest rate environments can result in different performance results of any index in the future.
- Rising Interest Rates: As interest rates increase, participation rates and other crediting rates we offer generally can be higher than when interest rates are significantly lower. Higher crediting rates provide you with a greater opportunity for higher interest credits in the future, but still could result in zero interest credits if the underlying index performance is not positive.
- Decreasing Interest Rates: As interest rates decrease, participation rates and other crediting rates we offer generally decline. Lower crediting rates provide you with less opportunity than during higher interest rate periods, but still could result in zero interest credits if the underlying index performance is not positive.

Also be aware that current crediting rates are held constant for the entire period reflected in the illustration. Please keep in mind that your actual crediting rates can change (lower or higher) as frequently as annually and will impact the actual outcome.

Therefore, as you work with your financial professional to determine what is best for you, please be mindful of this information and do not overly rely upon the illustrated outcomes when setting your expectations for future results. Your actual results will be determined based on the future performance of the index you choose AND the initial and renewal crediting rates set on the annuity, among other factors.

[1] Back-tested performance applies the index methodology to historical performance in instances where the index crediting strategy has not been in existence for as long as the illustrated period.

I-HYIN (10/22)

A look at the "range of potential outcomes"

To help you understand how varying index performance could impact the outcome of illustrated values shown (including any withdrawals, if applicable), we present a range of outcomes using the following three specified scenarios (as defined on p. 4):

- **Minimum Rates (Page 7):** *Assumes a "0% Credited Interest and Fixed Interes Account Minimum Declared Interest Rate (MDIR)".*
- **Current Rates (Page 8):** *Assumes a "Specific period" for the illustrated index or indices using current crediting rates held constant. The hypothetical returns assume that the currently applicable rates applied to index performance (e.g., participation rate; cap rate) remain unchanged during the entire illustrated period. In actual practice, those rates can change annually.*
- **Assumed Rate (Page 9):** *"3.00% Assumed Index Interest Rate"*

These range of outcomes are highlighted in the chart to the right. The chart shows the hypothetical Account Values for all 3 scenarios.

For the hypothetical specific period index performance shown on page 8, we use back-tested index Performance and, when available, historical performance. Back-tested performance (explained in more detail on page 3) is a way of generating hypothetical performance for a period when an index was not yet available. It gives you an indication of how the annuity would have performed by applying the index methodology to historical data. For back-tested performance we use the most recent 15 years repeated to show 30 years.

The goal in providing this information is to give you a more complete overview of how the annuity could perform over time. Since the outcome is based in part on the performance of an index, there is no guarantee as to Contract Value, and the actual value of your contract you'll receive will differ.

Power Index 5 Elite would have provided you $14,000 in total income over 31 years

This illustration assumes reallocation to the 5-yr Point-to-Point option for subsequent terms after the initial 5-Year Index Term. **However, please note that after the initial and any subsequent 5-Year Index Term, the account value allocated to the 5-Year Point-to-Point option will be automatically reallocated to the Annual Pont-to-Point Index Interest Account unless the contract owner affirmatively elects to reallocate to the 5-Year Point-to-Point option or any other available option.

Understanding Your Interest Crediting Strategy(ies)

Power Index 5 Elite credits interest using up to ten (10) interest crediting strategies – nine (9) index interest accounts and a fixed interest account. These strategies are described below. The factors used in calculating index interest are subject to change at any time up until the contract is issued, as are both the current Initial Interest Rate and the Minimum Declared Interest Rate on the fixed interest account. The Initial Interest Rate, Index Rate, Cap(s), Spread, and Participation Rates as applicable, can be found on the Contract Data Page and/or Rider Data Page(s) of the contract, as applicable, along with the minimum and maximum guaranteed rates and values. Thereafter, interest rates and index account factors will be declared annually in advance of each contract anniversary and will be guaranteed for the following contract year.

Index interest accounts are not a permanent part of the contract and may be removed due to circumstances beyond VALIC's control. Such circumstances include, but are not limited to, the discontinuation of an index, a change in the composition or calculation of an index, the inability to license the use of an index and the inability to hedge risks associated with these index interest accounts. Special rules govern how assets in a discontinued index interest account may be reallocated. These rules may differ by state. Please see the Owner Acknowledgment and Disclosure Statement for more information.

Understanding Your Interest Crediting Strategy(ies), continued

- **Franklin Quality Dividend Index Annual Point-to-Point Participation Rate:** This strategy credits index interest, if any, based on the percent change in the Franklin Quality Dividend Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **S&P Annual Point-to-Point with Cap:** This option credits calculated index interest every Contract Anniversary and is based on the percent change in the S&P500® Index over the one year period ending on that day. The annual index percent change, subject to declared Participation Rate, and Index Rate Cap, is the calculated rate of index interest for that Index Term. Interest for each Index Term is not earned until the end of that Index Term (on the Contract Anniversary). The rate of interest will never be less than zero.
- **S&P Annual Point-to-Point Participation Rate:** This option credits calculated index interest every Contract Anniversary and is based on the percent change in the S&P500® Index over the one year period ending on that day. The annual index percent change is subject to an annually declared Participation Rate and spread, and is the calculated rate of index interest for that Index Term. Interest for each Index Term is not earned until the end of that Index Term (on the Contract Anniversary). The rate of interest will never be less than zero.
- **S&P 5 Year Point-to-Point Index with Cap (5-Year Point-to-Point option):** This option credits calculated index interest on the 5th Contract Anniversary after the beginning of the 5-Year Index Term and is based on the percent change in the S&P500® Index over the 5 year period ending on that day. No interim interest credits for withdrawals or full surrenders during the 5-year Index Term. The index percent change over the 5 year period, subject to the declared Participation Rate and Index Rate Cap, is the calculated rate of index interest for that Index Term. **Please note that after the initial and any subsequent 5-Year Index Term, the value allocated to the 5-Year option will be automatically allocated to the Annual Point-to-Point Index Interest Account unless the contract owner affirmatively elects to reallocate to the 5 -Year Point-to-Point option**. Interest for each Index Term is not earned until the end of that Index Term. The rate of interest will never be less than zero.
- **MLSB Annual Point-to-Point Participation Rate (ML Strategic Balanced Index):** This strategy credits index interest, if any, based on the percent change in the MLSB Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **MSCI EAFE Annual Point-to-Point with Cap:** This option credits calculated index interest every Contract Anniversary and is based on the percent change in the MSCI EAFE Index over the one year period ending on that day. The annual index percent change, subject to declared Participation Rate, and Index Rate Cap, is the calculated rate of index interest for that Index Term. Interest for each Index Term is not earned until the end of that Index Term (on the Contract Anniversary). The rate of interest will never be less than zero.
- **PIMCO Annual Point-to-Point Participation Rate (PIMCO Global Optima Index):** This strategy credits index interest, if any, based on the percent change in the PIMCO Index over the Index Term (one year). The annual index percent change is subject to the declared Participation Rate, and is the calculated rate of index interest for that Index Term. The rate of index interest will never be less than zero.
- **Russell 2000® Annual Point-to-Point with Cap:** This option credits calculated index interest every Contract Anniversary and is based on the percent change in the Russell 2000® Index over the one year period ending on that day. The annual index percent change, subject to declared Participation Rate, and Index Rate Cap, is the calculated rate of index interest for that Index Term. Interest for each Index Term is not earned until the end of that Index Term (on the Contract Anniversary). The rate of interest will never be less than zero.
- **S&P Annual PTP Performance-Triggered:** This option credits interest every Contract Anniversary that is based on the percent change in the S&P500® Index over the one year period ending on that Contract Anniversary. The rate of interest credited will equal the Triggered Rate if the change in index value over the index term is equal to or greater than the minimum change in index value. Interest for each Index Term is not earned until the end of that Index Term. The rate of interest earned will never be less than zero.
- **Fixed Interest Account:** This option is a fixed-rate account with a 1-year term. Interest is credited daily on a compound basis to achieve the annual declared rate. The Fixed Interest Account initial interest rate is guaranteed for the first Contract Year. A new interest rate will be declared annually in advance of each contract anniversary and will be guaranteed for the following Contract Year.

Key Terms and Definitions

For the Interest Crediting Strategies

- **Index Term:** An Index Term is a period used to measure the change in the Index Prices for each Index Interest Account. At the end of the Index Term (i.e. on the contract anniversary), we may credit Index Interest. The initial Index Term for the Interest Index Accounts begins on the Contract Date. Subsequent Index Terms begin on the end date of the previous Index Term. The end date for an Index Term is on a Contract Anniversary.
- **S&P 500 Index:** It is an index of the stock of 500 publicly traded companies, without dividends. The S&P 500 Value on the Rider Effective Date is shown on the Rider Data Page. "S&P 500" means the value of the S&P 500 that is published by S&P at the close of each day that the S&P 500 is calculated
- **ML Strategic Balanced Index®:** It is an index comprised of a dynamic combination of the S&P 500 Index, without dividends, and the Merrill 10 Year Treasury Futures Index (total return), with a 6% volatility target. The ML Strategic Balanced Index Value on the Rider Effective Date is shown on the Rider Data Page. "ML Strategic Balanced Index" means the value of the ML Strategic Balanced Index that is published by BofAMerrill Lynch at the close of each day that the ML Strategic Balanced Index is calculated. This index embeds an annual index cost in the calculations of the change in Index Value over the Index Term. This "embedded index cost" will reduce the change in Index Value that would otherwise have applied, and funds certain operational and licensing costs for the index. It is not a fee paid by you or received by The Variable Annuity Life Insurance Company ("VALIC").
- The PIMCO Global Optima Index is a comprehensive equity and bond index, offering exposure to global equity and U.S. fixed income markets.

Column Heading Definitions

- **Index Annual Change:** represents the positive or negative change associated with the index for a given year. This change is the basis for the Interest Earned and Credited Interest rate associated with the interest crediting options illustrated.
- **Interest Earned and Credited Interest Rate:** In this report, Interest Earned on Index Accounts is the dollar amount of index interest earned and payable each year on amounts remaining in the Index Interest Account on the Contract Anniversary. It is based on the change in the index and factors used to calculate the Credited Interest Rate. Amounts in each index account on the contract anniversary are multiplied by the applicable Credited Interest Rate for that account. For the Fixed Interest Account MDIR, as well as Initial and subsequent annual declared rates, are credited and compounded daily to achieve the appropriate declared rate.

Key Terms and Definitions Continued

For the Assumed Rate depiction, annual Credited Interest Rate is the Assumed Rate and Interest Earned does not reflect any index strategy, term, spread, cap rate or participation rate.

- **Participation Rate:** The Initial Participation Rate is set at contract issue and is guaranteed for one year or two years (depending on strategy selection). After the first (or second) Contract Year, subsequent Participation Rates are declared annually at the end of each Index Term (on the Contract Anniversary) and are guaranteed for the following contract year.
- **Index Rate Cap:** The Initial Index Rate Cap is set at contract issue and is guaranteed for one year. After the first Contract Year, subsequent Index Rate Caps are declared annually at the end of each Index Term (on the contract anniversary) and are guaranteed for the following year. Generally, each Interest Crediting Strategy has a corresponding Rate Cap.
- **Minimum Index Rate Cap:** A declared Index Rate Cap cannot be set lower than the applicable Minimum Index Rate Cap stated on the Rider Data Page.
- **Minimum Participation Rate:** A declared Participation Rate cannot be set lower than the Minimum Participation Rate stated on the Rider Data Page.
- **Contract Anniversary Value:** The contract value on the contract anniversary. This value reflects reduction of any applicable annual Rider Fees.
- **Death Benefit:** The amount payable upon death, which is the Contract Value or the Minimum Withdrawal Value, if greater.
- **Cash Surrender Value:** In this illustration, it represents what you would receive if you withdrew all your money at one time. This illustrated value is the greater of the Cash Surrender Value and the Minimum Withdrawal Value. The Cash Surrender Value is the contract value adjusted for all applicable withdrawal charges. Power Index 5 Elite withdrawal charges decline over a period of five years and the Minimum Withdrawal Value is equal to a percentage of your premium(s), less prior withdrawals (excluding any withdrawal charges and MVA), and currently set at 87.5 %, accumulated at the Interest Rate for Minimum Withdrawal Values and currently set at 3.00 %.
- **Maturity Date:** The latest age, specified in your contract, by which you will need to select one of the following options if the Contract Value is greater than zero: 1) begin annuity income payments (see Annuity Options below) or 2) surrender the contract. If you do not select an option, we will automatically begin annuity income payments as set forth in the contract.
- **Annuity Options:** If you elect to annuitize the contract, available Annuity Options include payments for life only or life with period certain, either of which may be for single life or joint lives; a fixed period certain only; or any payment option that is mutually agreeable between you and the company.
- **Tax-qualified Plans:** This modified single premium product may not be appropriate for use with contributory IRAs (IRA, Roth and SEP) if you plan to make ongoing contributions. Also keep in mind, purchasing an annuity within a tax-qualified plan provides no additional tax-deferred benefit beyond that provided by the plan.
- **Additional Note on Cancellation:** If you find that the optional feature is no longer right for you, you may cancel the feature on the 5th contract anniversary or any contract anniversary thereafter. Once cancelled, the feature cannot be re-elected. Keep in mind that the feature may be automatically terminated under certain circumstances, such as when the contract is annuitized or surrendered. Other circumstances may also apply.

S&P 500® and S&P® are registered trademarks of Standard and Poor's Financial Services LLC. The trademarks have been licensed to S&P Dow Jones Indices LLC and have been sublicensed for use for certain purposes by The Variable Annuity Life Insurance Company ("VALIC"). The Power Index 5 Elite is not sponsored, endorsed, sold, or promoted by Standard and Poor's Financial Services LLC, S&P Dow Jones Indices LLC, or their affiliates, and none of Standard and Poor's Financial Services LLC, S&P Dow Jones Indices LLC, or their affiliates makes any representation regarding the advisability of paying premiums for the Power Index 5 Elite.

Merrill Lynch, Pierce, Fenner & Smith Incorporated and its affiliates ("BofA Merrill Lynch") indices and related information, the name BofA Merrill Lynch, and related trademarks, are intellectual property licensed from BofA Merrill Lynch, and may not be copied, used, or distributed without BofA Merrill Lynch's prior written approval. The products of licensee The Variable Annuity Life Insurance Company ("VALIC") have not been passed on as to their legality or suitability, and are not regulated, issued, endorsed, sold, guaranteed, or promoted by BofA Merrill Lynch. The PIMCO Global Optima Index™ (the "Index") is a comprehensive equity and bond index, offering exposure to global equity and U.S. fixed income markets. The Index is a trademark of Pacific Investment Management Company LLC ("PIMCO") and has been licensed for use for certain purposes by The Variable Annuity Life Insurance Company ("VALIC") with this annuity ("the Product"). The Index is the exclusive property of PIMCO and is made and compiled without regard to the needs, including, but not limited to, the suitability or appropriateness needs, as applicable, of VALIC, the Product, or owners of the Product. The Product is not sold, sponsored, endorsed or promoted by PIMCO or any other party involved in, or related to, making or compiling the Index. PIMCO does not provide investment advice to VALIC with respect to the Product or to owners of the Product.

Neither PIMCO nor any other party involved in, or related to, making or compiling the Index has any obligation to continue to provide the Index to VALIC with respect to the Product. Neither PIMCO nor any other party involved in, or related to, making or compiling the Index makes any representation regarding the Index, Index information, performance, annuities generally or the Product particularly.

PIMCO disclaims all warranties, express or implied, including all warranties of merchantability or fitness for a particular purpose or use. PIMCO shall have no responsibility or liability whatsoever with respect to the Product.

The Licensed PIMCO Index is comprised of a number of constituents, some of which are owned by entities other than PIMCO. The Licensed PIMCO Indices rely on a variety of publically available data and information and licensable equity and fixed income sub-indices. All disclaimers referenced in the Agreement relative to PIMCO also apply separately to those entities that are owners of the constituents of the Licensed PIMCO Indices. The constituents of the Licensed PIMCO Indices include: MSCI Inc., FTSE International Limited, FTSE TMX Global, Debt Capital Markets, Inc., Frank Russell Company and certain ETFs. The Licensee expressly agrees to include the following disclaimer and limited language in connection with the use of the Licensed PIMCO Indices for the Permitted Purposes.

All rights in the Russell 2000 Index (the "Index") vest in FTSE International Limited ("FTSE"). "FTSE®" is a trade mark of the London Stock Exchange Group companies and is used by FTSE under license.

The Product has been developed solely by The Variable Annuity Life Insurance Company ("VALIC"). The Index is calculated by FTSE or its agent. FTSE and its licensors are not connected to and do not sponsor, advise, recommend, endorse or promote the Product and do not accept any liability whatsoever to any person arising out of (a) the use of, reliance on or any error in the Index or (b) purchase of or operation of the Product. FTSE makes no claim, prediction, warranty or representation either as to the results to be obtained from the Product or the suitability of the Index for the purpose to which it is being put by The Variable Annuity Life Insurance Company ("VALIC").

The Products referred to herein are not sponsored, endorsed or promoted by MSCI Inc., and MSCI Inc. bears no liability with respect to any such Products or any index on which such Products are based. The contract contains a more detailed description of the limited relationship MSCI has with The Variable Annuity Life Insurance Company ("VALIC") and any related Products.

SPDR® S&P 500® ETF Trust (SPY ETF), SPDR® S&P® MidCap 400 ETF Trust (MDY ETF), and iShares Core U.S. Aggregate Bond ETF (AGG ETF) are constituents of the PIMCO Global Optima Index™. S&P® and SPDR® are registered trademarks of Standard & Poor's Financial Services LLC (S&P); iShares™ is a registered trademark of BlackRock Fund Advisors or BlackRock, Inc. and its subsidiaries, collectively, the "ETF Trademark Owners." The PIMCO Global Optima Index™ is not sponsored, endorsed, sold, or promoted by the ETF Trademark Owners. The ETF Trademark Owners make no representations or warranties to the owners of products utilizing the PIMCO Global Optima Index or any member of the public regarding the advisability of purchasing a product utilizing the PIMCO Global Optima Index. The ETF Trademark Owners have no obligation or liability in connection with the operation, marketing, trading or sale of the PIMCO Global Optima Index.

The index annuity product to which this disclosure applies (the "Product") has been developed solely by The Variable Annuity Life Insurance Company ("VALIC"). The "Product" is not in any way connected to or sponsored, endorsed, sold or promoted by the London Stock Exchange Group plc and its group undertakings (collectively, the "LSE Group"). FTSE Russell is a trading name of certain of the LSE Group companies.

All rights in the Russell 2000® Index (the "Index") vest in the relevant LSE Group company which owns the Index. "Russell®", "Russell 2000®", "FTSE®" "Russell®", and "FTSE Russell®" are trade mark(s) of the relevant LSE Group companies and are used by any other LSE Group company under license. "TMX®" is a trade mark of TSX, Inc. and used by the LSE Group under license.

The Index is calculated by or on behalf of FTSE International Limited or its affiliate, agent or partner. The LSE Group does not accept any liability whatsoever to any person arising out of (a) the use of, reliance on or any error in the Index or (b) the purchase of or operation of the "Product". The LSE Group makes no claim, prediction, warranty or representation either as to the results to be obtained from the "Product" or the suitability of the Index for the purpose to which it is being put by VALIC.

The product referred to herein is not sponsored, endorsed, or promoted by MSCI, and MSCI bears no liability with respect to any such product or any index on which such product is based. The contract contains a more detailed description of the limited relationship MSCI has with Licensee and any related product.

The Franklin Quality Dividend ("FQD") Index has been developed and is owned solely by QS Investors LLC, a subsidiary of Franklin Resources, Inc. Neither Blackrock (the sponsor of iShares ETFs) nor Invesco is affiliated with Franklin Resources, Inc. and QS Investors, LLC. FQD and any security or product based on or making use of FQD are not sponsored, endorsed, or promoted by Blackrock or Invesco, and neither company bears any responsibility or liability for or with respect to FQD or any security or product based on or making use of FQD.

FQD is calculated on behalf of QS Investors, LLC by Solactiveor its affiliate, agent or partner. Solactive, QS Investors, LLC, Franklin Resources, Inc. and their respective affiliates do not make any claim, prediction, warranty or representation as to the accuracy and completeness of FQD, the results to be obtained from use of FQDI or the suitability of FQD for the purpose to which it is being put by The Variable Annuity Life Insurance Company ("VALIC"), and bear no liability for FQD or for any security or product based on or making use of FQD.

FQD embeds an annual index cost in the calculations of the change in index value. This embedded index cost will reduce any change in index value, and it funds certain operational and licensing costs for the Index. Since it will affect the return of the Index, it may also impact the amount of interest credited to an index annuity; however, it is not a fee paid by the policy owner or received by the issuing insurance company.

All contract and optional benefit guarantees, including any fixed account crediting rates or annuity rates, are backed by the claims-paying ability of the issuing insurance company. They are not obligations of or backed by the distributor, insurance agency or any affiliates of those entities and none makes any representations or guarantees regarding the claims-paying ability of the issuing insurance company.
